SIT	System integration test
API	Application programming interface
RPO	Recovery point objective
RTO	Recovery time objective

3. Introduction

3.1 Purpose

This document describes what iNXT BrokerVerse OOTB does, module by module, for a Philippine non-life insurance broker. It is written for the broker's management, process owners, finance, compliance and IT teams after the product presentation, as a reference for the evaluation and for the comparison with other vendors.

For each module it gives what the module does, its key features, the Philippine specifics, the personas who use it, the key reports, the approvals and controls, and the integrations. Later chapters describe the end-to-end process, the scope of the OOTB edition against optional extras, the non-functional capabilities, the deployment and support model, and a feature checklist the broker can use to compare vendors.

3.2 Conventions

- Menu paths are written as on screen, for example Accounts > Bank Reconciliation > Reconciliation Workspace.
- Settings are named by their key in Master > Configuration, for example `claims.sla_days`. The value given is the delivered value; the broker can change it.
- Money is in Philippine pesos (PHP). The business time zone is Asia/Manila.
- **Recommended** marks advice from iorta TechNXT that is not built into the product.

- The figures in this document come from the product (code, configuration and screens), from the release test of 03 and 04 October 2026 and from the release verification of 04 October 2026 on the merged release (Test Summary Report 1.3); the counts in The product at a glance are those of the release verification.

3.3 Version history

Version	Date	Change
1.0	03 October 2026	Issue for the release test
1.1	04 October 2026	Added: Compliance Officer role; IC compliance (licence register and commission block, fit and proper, insurer authority, complaints, IC annual statement and production report); NPC breach register, masking by role and field encryption; My Work, the enterprise menu and the Help panel; Philippine reference masters (PSGC); Product Configurator rules in the business flow; audit trail screen; go-live data workbench, environment comparison, transaction reset, data masking and the release pipeline; branding and e-signatures; sales activities, quote wizard covers and risk fields from the Product Configurator, BIR Form 2307 for supplier payments, fixed asset disposals. Updated the integrations, disbursement, data privacy, administration, feature checklist and points to note
1.1.1	04 October 2026	Release figures aligned with the release verification on the merged release (Test Summary Report 1.3): product at a glance (API routes, jobs, number series, release test, user manual), upload templates, performance observations
1.1.2	04 October 2026	Client brand packs: basis is the client's contract with iorta TechNXT (management decision of 04 October 2026)

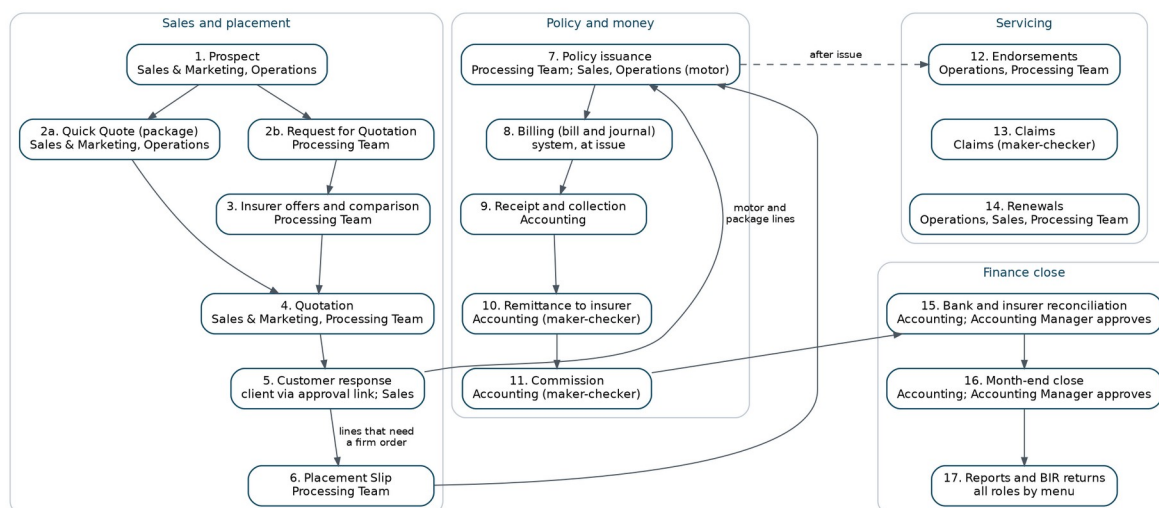

3.4 The product at a glance

Item	BrokerVerse OOTB
Scope	Full broking cycle and broker accounting: prospects to renewals, billing to month-end close, BIR working papers
Personas	8 roles: System Administrator, Sales & Marketing, Processing Team, Operations, Claims, Accounting, Accounting Manager, Compliance Officer (AML/CFT); IC compliance, complaints and privacy permissions given to the roles the broker chooses
Screens	173 menu screens checked per role in the release test
Reports	39 catalogue reports in Excel, CSV and PDF, plus dashboards and document outputs
APIs	1,356 registered API routes, documented in OpenAPI, a Postman collection and an Excel touchpoint list
Scheduled jobs	35 jobs in Asia/Manila time; 14 are delivered switched off (among them the remittance schedules job and the overdue data subject request reminder)
Number series	85 document number series, counters only move forward
Release test	629 test cases (617 passed, 1 failed, 3 blocked, 8 not run; Test Summary Report 1.3 of 04 October 2026); 1,113 automated backend tests in 104 files and 175 front-end tests in 33 suites, all passed on the merged release; a full UAT cycle of 433 business steps in 12 phases (2,168 API calls) and a go-live rehearsal of 52 checks on the final code
Technology	React 18 web application, Node.js 22 API, PostgreSQL 16 database
User documentation	User manual version 1.2 of 279 pages for the eight roles, seven role decks

4. The end-to-end process

4.1 The broking cycle

Every piece of business passes through the same steps. Each step is done on its own screen, usually by a different team, and each leaves a numbered document behind.

End-to-end process: sales and placement, policy and money, servicing and finance close

#	Step	What happens	Who
1	Prospect	The prospect is recorded with contact details and address (LD-)	Sales & Marketing, Operations
2	Quick Quote or Request for Quotation	Packaged products are quoted from insurer rate tables; other risks go to several insurers on a broker slip (BS-, OFR-)	Sales & Marketing, Processing Team
3	Quotation	The chosen terms are priced for the client with taxes and commission; the client accepts online (QT-)	Sales & Marketing, Processing Team
4	Placement Slip	The firm order goes to the lead insurer and co-insurers; each confirms its share (PS-)	Processing Team
5	Policy issue	The policy is issued with its participants, the client is created and the premium is billed (POL-, CL-, INV-)	Processing Team
6	Payment capture	The client's payment is recorded for Accounting to verify	Operations, Sales & Marketing, Processing Team
7	Official receipt	Accounting posts the official receipt against the open bill (OR-)	Accounting
8	Commission	Referrer commission becomes payable when the premium is collected and is paid less withholding tax (PV-)	Accounting, maker and checker
9	Remittance	Collected premium, net of commission, is remitted to each insurer by its share (REM-, SET-, PV-)	Accounting, maker and checker
10	Endorsement	A change to the policy is recorded and additional or return premium is billed (END-)	Operations, Processing Team
11	Claim	A loss is registered, followed with the insurer and settled (CLM-)	Claims
12	Renewal	Policies enter the pipeline 90 days before expiry; notices at 60, 30 and 15 days	Operations, Sales & Marketing, Processing Team
13	Month-end	Bank and insurer reconciliation, month-end	Accounting,

#	Step	What happens	Who
		close, BIR reports (BRC-, MEC-, CWT-)	Accounting Manager

4.2 Placement journey by line of business

Not every line uses every step. The journey of each line is set in `placement.journey` (Master > Configuration, Placement). The screens show the journey of each record as a progress bar and refuse a step the journey does not allow.

Line of business	Request for Quotation	Quotation Slip	Placement Slip	Record Issued Policy
Motor	Optional	Required	Optional	Optional
Fire, IAR, Marine, Casualty, Engineering	Optional	Optional	Required	Optional
Other lines (default)	Optional	Optional	Optional	Optional

4.3 The money trail

Every business event posts a balanced journal through its posting rule. On a co-insured policy each payable and commission line carries its insurer, so remittance, reports and claim recoveries split by share.

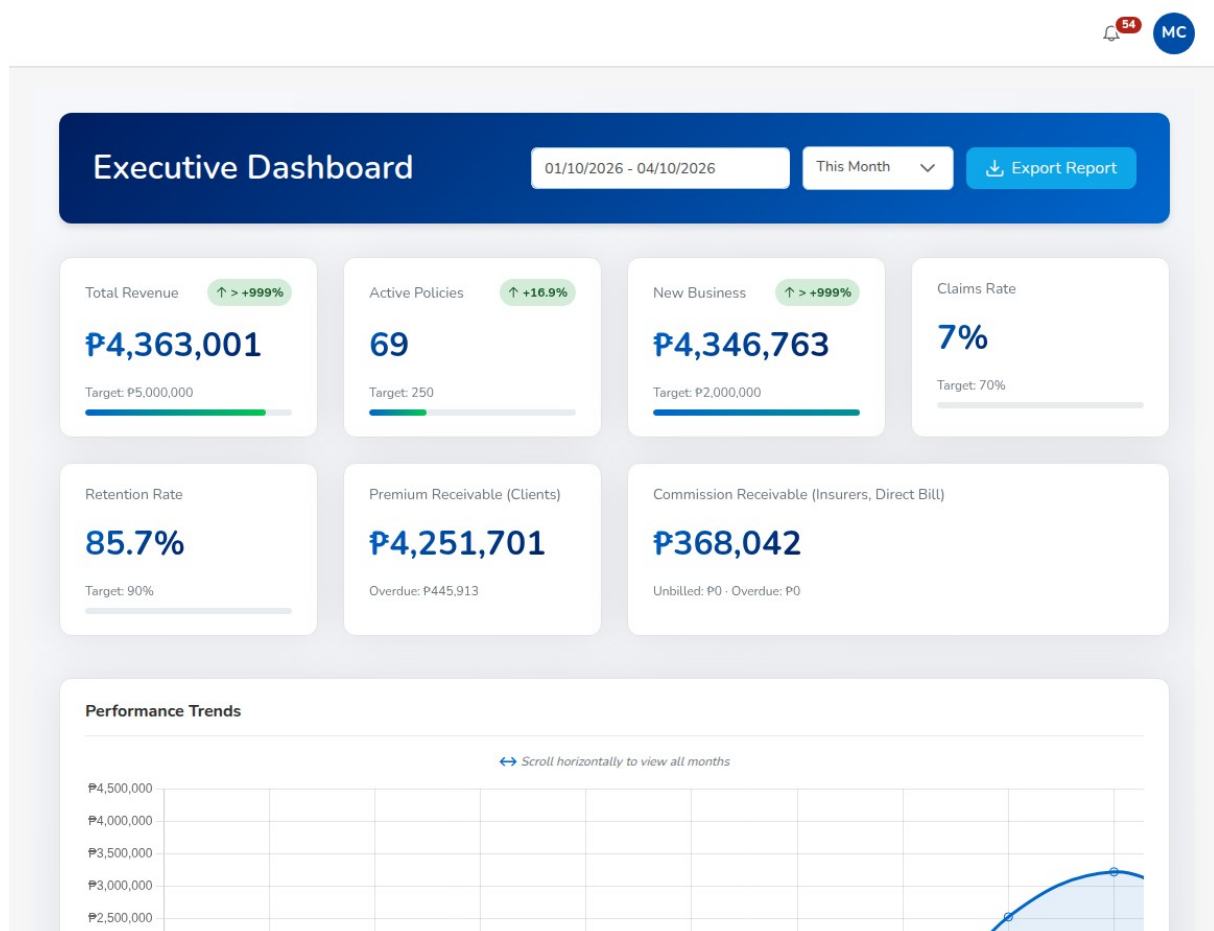

Event	Journal (summary)
Policy issued, broker billed	Dr Premiums Receivable; Cr Premiums Payable to Insurers (per insurer), premium VAT, DST and LGT due to insurers, Brokerage Commission Income (per insurer)
Official receipt	Dr Cash in Bank; Cr Premiums Receivable
Remittance to insurer	Dr Premiums Payable to Insurers; Cr Cash in Bank
Policy issued, direct bill	Dr Commission Receivable - Insurers (Direct Bill); Cr Brokerage Commission Income, Output VAT Payable
Direct bill commission collected	Dr Cash in Bank, Creditable Withholding Tax (BIR 2307); Cr Commission Receivable - Insurers

5. Functional modules

5.1 Dashboards

What it does. Shows live figures from policies, bills, claims and commission lines, updated as soon as a transaction is saved.

- Executive Dashboard: Total Revenue, Active Policies, New Business, Claims Rate, Retention Rate, Premium Receivable (Clients) and Commission Receivable (Insurers, Direct Bill), against targets in dashboard.targets; trends by product line, region, product and agent; export of the Production Register.
- Sales Dashboard: prospects, quotations, conversion, policies issued, premium and open pipeline of the sales team or one account executive.
- Processing Dashboard (Processing Workbench): submissions received this week and older, average cycle time, data-quality alerts, workload by assignment group; high priority from PHP 5,000,000 sum insured.
- Claims Dashboard: open, overdue (past `claims.sla_days`, 20 days) and today's claims, highest line and location, recent claims, export.
- Commission Dashboard: brokerage income, comsub, net margin, outstanding payable and withholding tax, in Accounting and Management views.

Executive Dashboard

Aspect	Detail
Philippine specifics	PHP figures; calendar periods in Philippine time
Personas	Every role sees the Executive Dashboard except Claims; Sales, Processing and Claims have their own
Key reports	Production Register export; claims data export
Controls	Figures limited by role; scoped roles see only their own records (security.scoped_roles)

5.2 Prospects and clients

What it does. Records prospects (leads), turns them into clients when the first policy is issued, and shows each client's policies, claims, renewals and endorsements in one view.

- Prospects for Motor, Fire and Allied Perils, Industrial All Risks and Employee Benefit, retail or corporate; corporate prospects require company name and TIN.
- Bulk upload of prospects from a template (up to 1,000 rows per file) with row-level error report.
- Lead statuses New, Contacted, Qualified, QuoteGenerated, Converted, Lost.
- Client onboarding before the first policy (**Onboard client**): individual or juridical, government ID, TIN, PSGC address, signatories and beneficial owners (see AML/CFT compliance); otherwise the client code CL- is created at first policy issue; client view with Policy, Claim, Renewal, Endorsement and Data privacy tabs.
- Consent per purpose recorded on the prospect and client screens (see Data privacy).
- Sales activities (Operations > Sales & Marketing > Sales Activities, and the Activities tab of a prospect, a quotation or a client): account executives log calls, meetings, e-mails and visits on a prospect, a quotation or a client (activity type and outcome from the masters Sales Activity Types and Sales Activity Outcomes under Master > Organization, contact, duration, notes, next step with its date). Each prospect, client and quotation shows its activity timeline (a prospect and a client also show those of their quotations) and the open next step. The next step becomes a follow-up task in the account executive's My Work; a later activity on the same record completes it.
- Activity report by account executive and period: activities by channel, prospects, clients and quotations worked, positive outcomes, next steps and how their follow-ups stand (done, open, overdue); Excel export.

Aspect	Detail
Philippine specifics	Philippine mobile number formats, 4-digit ZIP code, province, city and barangay address, TIN
Personas	Sales & Marketing, Operations; Processing Team views
Key reports	Lead Conversion Funnel; lead list by category; Sales Activity Report by account executive
Controls	Changes to client details on an issued policy go through a Personal Details Change endorsement; audit trail on every change
Integrations	Bulk upload (XLSX or CSV)

5.3 Quick Quote and Compare Insurers

What it does. Quotes packaged products on the spot from each insurer's rate table, and compares the premiums of several insurers side by side. Non-package risks go to the insurers through a Request for Quotation.

- Packaged products delivered with the sample set-up include Burglary and Robbery, CTPL, Group Personal Accident, Householder, Micro-insurance, Motor Vehicle, Personal Accident and Travel.
- Package Bundles and Insurer Rate Tables (rate basis, minimum premium, deductible, commission) in Master > Finance.
- Premium taxes and LGU rates applied per product (Master > Finance > Premium Taxes & LGU Rates).
- Payment links for a package quotation; a paid link creates the official receipt and can issue the package policy.

The screenshot displays the 'Quick Quote' section of a web application. At the top right, there are notification icons for 54 alerts and a user profile icon labeled 'MC'. The main area is titled 'Quick Quote' and contains a grid of product cards. Each card lists an insurance product, its category (Retail or Corporate), and a description of the quoting process. Buttons for 'Request quotation' or 'Start quote' are provided for each product.

Product	Category	Quoting Process	Action Button
Burglary and Robbery	Retail and corporate	No quote wizard for this product yet: request the terms from the insurers.	Request quotation
Compulsory Third Party Liability	Retail	Quote wizard: enter the customer and the vehicle, and the premium is priced from the tariff.	Start quote
Group Personal Accident	Retail and corporate	No quote wizard for this product yet: request the terms from the insurers.	Request quotation
Householder Insurance	Retail	No quote wizard for this product yet: request the terms from the insurers.	Request quotation
Micro-insurance	Retail	No quote wizard for this product yet: request the terms from the insurers.	Request quotation
Motor Vehicle Insurance	Retail	Quote wizard: enter the customer and the vehicle, and the premium is priced from the tariff.	Start quote
Personal Accident	Retail	No quote wizard for this product yet: request the terms from the insurers.	Request quotation
Travel Insurance	Retail	No quote wizard for this product yet: request the terms from the insurers.	Request quotation

Quick Quote of packaged products

Aspect	Detail
Philippine specifics	DST of PHP 0.50 per PHP 4.00 of premium, a fraction counting as a whole unit; LGT per city or municipality
Personas	Sales & Marketing, Operations
Key reports	Production Register, Premium by Product / Month / Insurer
Controls	Commission is never printed on the package quotation or insurer comparison sent to the client
Integrations	PayMongo and Dragonpay payment links (sandbox provider for training and UAT)

5.4 Motor quotation and customer approval

What it does. Prices a motor risk in five steps, sends the quotation to the client for online approval and turns the accepted quotation into a policy.

- Steps: policy and vehicle details, plan recommendations (CTPL, Basic, Comprehensive), coverage with Calculate, accessories and policy limits, order summary with discount, referrer and signatory.
- Own damage, acts of nature, roadside assistance, personal accident, excess bodily injury and property damage, Auto Passenger PA per seat, accessories.
- The product rules drive the quotation: the covers offered are those of the governing product template's Coverage Builder (mandatory covers always included, optional covers added or removed, each priced on its "Priced on quotation as" premium; the server prices on the same choice), and the wizard asks for the risk details the template's acceptance rules and rating factors test (driver's date of birth, claims in the last 3 years, fair market value, modifications, claim-free years, number of members for group risks), so every rule is evaluated. `underwriting.require_rule_fields` makes the server refuse a quotation without them.
- Co-insurance on the quotation, with shares totalling 100% and one lead.
- Brokerage rate from the Commission Rate Matrix, then the insurer default, then `commission.default_rate` (15%); `comsub` for the referrer chain; discount up to 30% taken from the broker's commission.
- Send for Customer Approval e-mails a signed link valid for 168 hours; the client approves without signing in. Share by download, e-mail, WhatsApp, Send to Insurer or copied link.
- Quotation validity 30 days (`limits.quote_validity_days`); the Quotation expiry job runs daily.
- Audit Trail tab with every field change.

Quotation list

Aspect	Detail
Philippine specifics	Vehicle class per Insurance Commission tariff; CTPL 1-year and 3-year amounts, inclusive of taxes and never discounted; VAT 12%, DST PHP 0.50 per PHP 4.00 or fraction, LGT 0.75% on the net premium
Personas	Sales & Marketing, Operations prepare; Processing Team is notified (quotations.approval_notify_roles)
Key reports	Production Register, New Business vs Renewals, Lead Conversion Funnel
Controls	The server prices every quotation again from the configured rates; a premium changed in the browser is refused. A quotation cannot be approved by its creator (workflow.quote_maker_checker)
Integrations	E-mail (approval link, share); public approval page

5.5 Request for Quotation and placement

What it does. Presents a risk to several insurers, records their offers and declines, compares them, and binds the cover with a firm order to the lead insurer and co-insurers.

- Request for Quotation (broker slip): customer and risk, risk details as items and values, requested covers with sums insured and deductibles, insurers approached, response due date, remarks. Submitting creates one offer record per insurer and e-mails each insurer's placement address.

- Offers recorded as Offered, Declined or Pending, with net premium, rate, line offered, taxes, validity, deductibles, special terms and the insurer's reference and offer letter.
- Compare offers ranks by gross premium, marks the best offer, shows the market capacity, and lets the user select offers, the lead insurer and the shares.
- Placement Slip from a broker slip, from an accepted quotation, as a direct placement, or with Record Issued Policy for a policy the insurer already issued.
- Send to insurer(s) e-mails each participant a slip showing its own share; Confirm records the insurer's policy or certificate number; a decline prompts a change of participants.
- Slip PDFs for the whole market or for one insurer.

Request for Quotation: Compare offers

Aspect	Detail
Philippine specifics	Co-insurance common in the Philippine market; taxes split per participant
Personas	Processing Team; Sales & Marketing and Operations follow their accounts
Key reports	Placement Pipeline, Market Response (hit ratio per insurer), Co-insurance Register
Controls	Shares must total exactly 100% with one lead; a line that requires a Placement Slip cannot be issued until every participant has confirmed
Integrations	E-mail to insurers (broker slip, placement slip); PDF, no insurer API

5.6 Policy issuance and servicing

What it does. Issues the policy with its participants, creates the client, bills the premium or books the direct-bill commission, and holds the policy record for servicing.

- Issue from a bound Placement Slip, convert an accepted motor quotation, or Record Issued Policy.
- Motor issue captures government ID type, number and image, chassis, motor and plate or MV file number, mortgagee, CTPL certificate number and authentication code, and five vehicle photos.
- Billing mode per policy: broker billed or direct bill; default from the insurer, else `direct_bill.default_billing_mode`.
- Policy details with coverage, premium breakdown, participants, endorsements, payment status, documents, policy invoice and Premium Accounting Entries.
- Policy statuses Active, Expired, Renewed, Lapsed, Cancelled; payment statuses Pending, Reviewing, Partial, Completed, Refunded.
- Bulk upload for new business, or for the in-force book at go-live without bills or journals.
- Policy issued e-mail to the client with the policy schedule attached.
- Cover notes (CVN-) while the policy is pending: issued from an accepted quotation or a sent / bound placement slip for `cover_note.validity_days` (30), printed on the letterhead and e-mailed; superseded and linked when the policy is issued, expired after the cover period, reminder to the owner before expiry (Operations > Cover Notes).

5.7 Endorsements and cancellations

What it does. Records changes to an issued policy, sends them to the insurer, and bills additional premium or credits return premium.

- Motor: Personal Details Change, Motor Details Change, Coverage Change, Policy Extend, Policy Cancel.
- Fire and Allied Perils: Regular / Premium Change; Policy Cancellation full, partial, pro-rata or pro-rata partial.
- Coverage changes priced again with the configured rates; CTPL stays as issued.
- Completion with the insurer's endorsement document; the change is applied to the policy and the client.
- Return premium on premium already remitted is booked as a refund due from each insurer and netted on its next remittance; commission clawed back on the returned part.
- Cancellation return premium computed from the days left (Operations > Policy Cancellation and every cancellation endorsement): pro-rata when the insurer cancels, the short-period scale (Master > Insurance Management > Short-Period Rates) when the insured cancels, flat from inception; partial cancellation on the part cancelled; premium taxes from the charge engine (endorsements.cancellation_returned_taxes) and the commission reversed through posting rule policy.cancel.

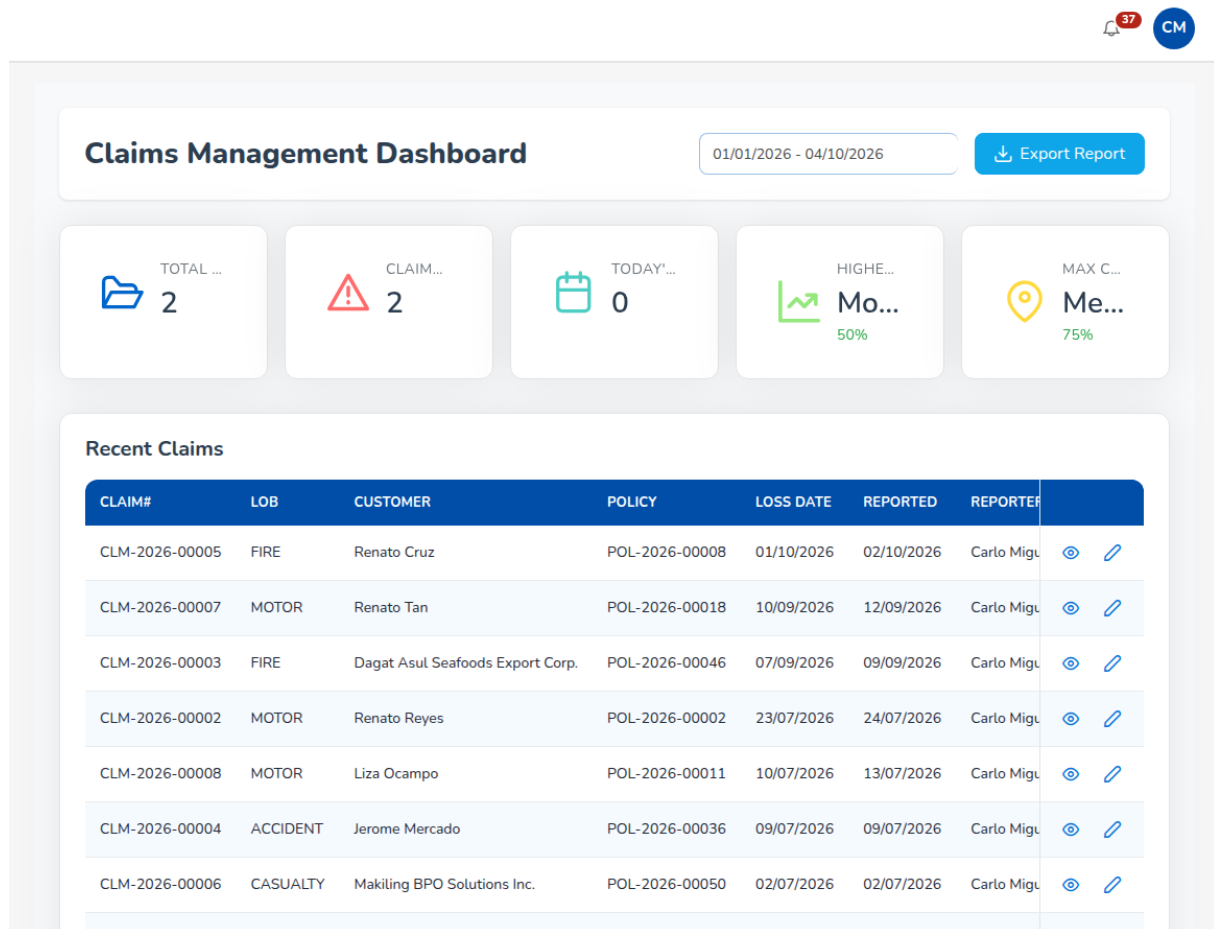

Aspect	Detail
Philippine specifics	Taxes follow the premium: return premium gives negative VAT, DST and LGT
Personas	Operations raises; Processing Team completes
Key reports	Production Register; client view Endorsement tab
Controls	Endorsement not offered for expired, lapsed, cancelled or renewed policies, or while payment is pending; numbered END-
Integrations	E-mail to the client on completion or cancellation

5.8 Claims

What it does. Registers a loss under a policy, notifies the insurer, follows the adjuster and settles the claim with a second approver.

- Registration with incident, driver and third-party details and documents; the Preliminary Loss Advice is e-mailed to the insurer's claims address.
- Adjuster details and the insurer's claim number; statuses Pending, Processing, Pending Approval, Approved, Settled, Closed, Rejected.
- Settlement by cash, card or cheque with documents; approval by a second Claims user; claim settled on approval (claims.auto_settle_on_approval).
- Co-insured policies show each insurer's share of the claim and the settlement.
- Claims paid through the broker: funds received from each insurer and payment to the claimant, each posted with its journal.
- Claim letters on the letterhead: Acknowledgment letter, Claims Discharge Voucher, Claims Data sheet and FIR.

- Claim Audit Trail and field change history.
- Claim document checklist by line of business and claim type (Master > Insurance Management > Claim Document Checklist), received / waived status, missing-document reminders to the claimant (manual and daily), submission to the insurer refused while a required document is missing (claims.require_documents_before_submission).
- Motor claim repairs: estimates of accredited repair shops, the adjuster's decision, supplementary estimates, letter of authority (LOA-) with the insured's participation (motor_claims.participation) and the vehicle release acknowledgement.
- Accounts > Claims Settlements: funds received from insurers and payment to the claimant from the Accounting menu, with the claim payment voucher (CPV-) and the release and quitclaim.

Claims Dashboard

Aspect	Detail
Personas	Claims; Accounting records the cash of claims paid through the broker
Key reports	Claims Position, Claims Ageing; Claims Dashboard export
Controls	Claim refused outside the policy period, for a future loss date, and while premium is unpaid (claims.block_unpaid_premium); settlement maker-checker (claims.settlement_maker_checker); handling time 20 days (claims.sla_days)
Integrations	E-mail to insurer; reinsurance recovery (see Reinsurance)

5.9 Renewals

What it does. Puts every policy into a renewal pipeline before expiry, sends notices, supports negotiation and turns the accepted renewal quotation into the next term.

- Pipeline 90 days before expiry (`renewals.pipeline_days`); notices at 60, 30 and 15 days (`limits.renewal_notice_days`); lapse 30 days after expiry (`renewals.grace_period_days`).
- Renewal Policy, Renewal Batch (up to 500 policies), Renewal Queue, Retention Analytics, At-Risk Policies, Negotiations, Lapse Management with win-back campaigns, Performance.
- At-risk score from claims in the term, unpaid premium, expiry within 30 days, premium increase, no contact and first renewal (`renewals.risk_weights`), with recommended actions.
- Renewal issues the new term, marks the old policy Renewed, bills the premium and accrues commission to the original referrer.

Renewal Queue

Aspect	Detail
Personas	Operations and Sales & Marketing work renewals; Processing Team approves renewal terms
Key reports	Renewal Retention (retained, lost, pending, retention rate); Retention Analytics; Performance
Controls	Renewal terms maker-checker (<code>renewals.maker_checker</code>); optional placement journey for renewals (<code>placement.journey_applies_to_renewals</code>)

Aspect	Detail
Integrations	Renewal notices and reminders by e-mail through the renewal notice queue

5.10 Billing, payments and official receipts

What it does. Bills the premium, records how the client paid, and posts the official receipt.

- Premium bill (INV-) on policy issue, endorsement and renewal; policy invoice printable and e-mailed to the client with the PDF attached (E-mail invoice on the collection detail).
- Payment capture by Operations, Sales & Marketing or the Processing Team: pay later, bank transfer, cheque, online payment or cash, with reference and proof; Accounting is notified to verify.
- Official receipts from the Official Receipt series, posted only by Accounting, against open bills; partial payments; returned cheques cancel the receipt and reopen the bill.
- E-mail receipt on the receipt view sends the official receipt PDF to the client (receipts.email_on_record switches automatic sending on).
- Bulk Print on the letterhead; bulk upload of receipts (up to 1,000 rows).
- Payment links (PL-) for a quotation, a package quotation or a policy's open premium.

Row count: 20 ▾

<< < 1 - 20 of 58 > >>

Aspect	Detail
Philippine specifics	OR numbering can continue the old system's numbering to match the BIR registration; letterhead with TIN
Personas	Accounting posts; Operations, Sales & Marketing and Processing Team capture payments
Key reports	Receipts Register, SOA / Premium Receivable, Collection Report
Controls	Receipt amount cannot exceed the bill balance; receipts cancelled with a reason, never deleted
Integrations	PayMongo (Checkout Session), Dragonpay (Payment Switch), sandbox provider; signed and idempotent webhooks; e-mail with PDF attachment

5.11 Collections and credit control

What it does. Follows up unpaid premium by age and manages credit risk on broker-billed business.

- Collections list with ageing buckets (current, 1-30, 31-60, 61-90, over 90 days), due date from the insurer's Premium Payment Warranty days, else collections.default_credit_days (30).
- Collection reminders e-mailed 7 days before the due date and every 7 days after (daily job); Send Payment Reminders Now.
- Collection items with assignments, commitments, escalation and a log of calls, e-mails and visits.
- Credit Control: Instalment Plans (split a bill into instalments, or issue a separate invoice per instalment with its own due date and booking journal), Premium Warranty Monitor (reminders, extension requests approved by the Accounting Manager, cancellation requests that create a draft cancellation endorsement), Client Credit Limits, Remittance Ageing.
- Import open items at go-live from the old system's ageing.
- Post-dated cheque register (Accounts > Post-Dated Cheques): cheques on hand with their vault location, deposit due list and daily reminder, deposit on the cheque date creating the official receipt, cleared, bounced (receipt cancelled, client e-mailed), replacement and return.

Premium Warranty Monitor

Aspect	Detail
Philippine specifics	Premium payment warranty per insurer, reflecting the broker's credit terms with each insurer
Personas	Accounting, Accounting Manager
Key reports	Receivables Ageing, SOA / Premium Receivable, Collection Report, Remittance Ageing
Controls	Warranty extensions need approve:credit-control; nothing is cancelled automatically; credit limit exceptions reported to collections users
Integrations	E-mail reminders

5.12 Accounts payable and fixed assets

What it does. Keeps the broker's own payables and assets: supplier invoices, supplier payments, the BIR Form 2307 of the tax withheld from suppliers, and the fixed asset register with its monthly depreciation and disposals.

- Suppliers (TIN, VAT registration, EWT tax code, terms, default expense account); supplier invoices (APV-) with input VAT and expanded withholding tax, approved by a second user (approve:payables) and posted (posting rule ap.invoice); supplier payments (SPV-, posting rule ap.payment); AP ageing; AP and payment vouchers.
- Fixed asset register (FA-): asset classes with useful life and accounts, assets from supplier invoice lines or registered by hand (with the go-live

accumulated depreciation), straight-line schedule, monthly depreciation run per asset class (posting rule fa.depreciation), also a step of the month-end close.

- Supplier 2307: BIR Form 2307 per supplier and quarter for the expanded withholding tax withheld on supplier invoices (ATC of the invoice's EWT code), from the same generator as the commission payees' certificates, issued one by one or all at once; the supplier EWT is in the QAP, the 0619-E and 1601-EQ (reconciled with the ledger), the 1604-E alphalist and the DAT files.
- Asset disposal (FAD-): sale or write-off of an asset; cost and accumulated depreciation removed, proceeds and output VAT of a sale, gain or loss on disposal (posting rule fa.disposal); a sale issues its BIR sales invoice (received into a bank account, or collected on the invoice); disposal voucher, disposal register with Excel export; a disposal is cancelled by reversal and the asset restored.

Aspect	Detail
Philippine specifics	Input VAT at the VAT12-IN code; EWT codes of the BIR (WC158, WC160, WC100 ...) withheld from suppliers
Personas	Accounting records and pays; Accounting Manager approves
Key reports	AP Ageing, Fixed Asset Register (Excel), Disposal Register (Excel), Supplier 2307
Controls	Maker-checker on supplier invoices (payables.maker_checker); one invoice number per supplier; an asset is depreciated once per period; an asset is disposed only after its depreciation up to the month before (fixed_assets.disposal_requires_depreciation_to_date)
Integrations	Upload templates and go-live sheets for suppliers and asset classes

5.13 Disbursement and petty cash

What it does. Pays insurers, referrers, clients and suppliers by payment voucher and cheque, and runs petty cash funds.

- Payment vouchers (PV-) by payee type (Customer, Insurer, Agent/Referrer, Supplier) against selected payables; bank account and cheque book; statuses Draft, For approval, Approved, Paid, Cancelled.
- Bulk Disburse for referrer payouts; bulk upload and bulk print on the letterhead.
- Petty cash: Initiate a fund, Request, Disbursement, Receipts, Replenish; custodian notified when a fund drops below its minimum.

Aspect	Detail
Philippine specifics	Withholding tax posted on payments to agents, referrers and suppliers, feeding BIR Form 2307 and the QAP
Personas	Accounting, Accounting Manager
Key reports	Payables / Disbursement Register
Controls	Voucher and cheque approval by a different user (finance.maker_checker_enabled); petty cash requests maker-checker; approval limits by Authority Matrix
Integrations	Cheque printing; bank payment files (bulk credit, InstaPay, PESONet) through Accounts > Bank Payment Files

5.14 Remittance to insurers and direct bill

What it does. Remits collected premium, net of commission, to each insurer by its share; for direct-bill policies, bills the broker's commission to the insurer.

- Automated Processing creates draft remittances per insurer from collected, unremitted premium; due date from the insurer's Remittance Terms, else `remittance.default_due_days` (30).
- Approval Workflow: each approver acts within the Remittance approval and Remittance settlement limits of the Authority Matrix (delivered: Accounting up to PHP 1,000,000, Accounting Manager without limit); cover during absence through Users and Access > Delegations.
- Settlement: premium less commission less tax plus or minus adjustments gives the net settlement; the insurer payment voucher is raised in Disbursement.
- Tracking, Statements, Reconciliation of bank transactions (tolerance PHP 0.50), Bulk Processing, Scheduling (due schedules run by the `remittance-schedules` job once switched on in Master > Schedules), Electronic Transfer records (InstaPay, PESONet, RTGS, wire), Exception Management, Adjustments, Notifications, History, Analytics.
- Direct Bill Processing: commission debit notes (DN-) with 12% output VAT, 10% EWT and net cash expected; due 30 days later; collection with tax withheld; change of billing mode with a reason.
- Commission debit note e-mailed to the insurer with the PDF attached.

Automated processing of remittances

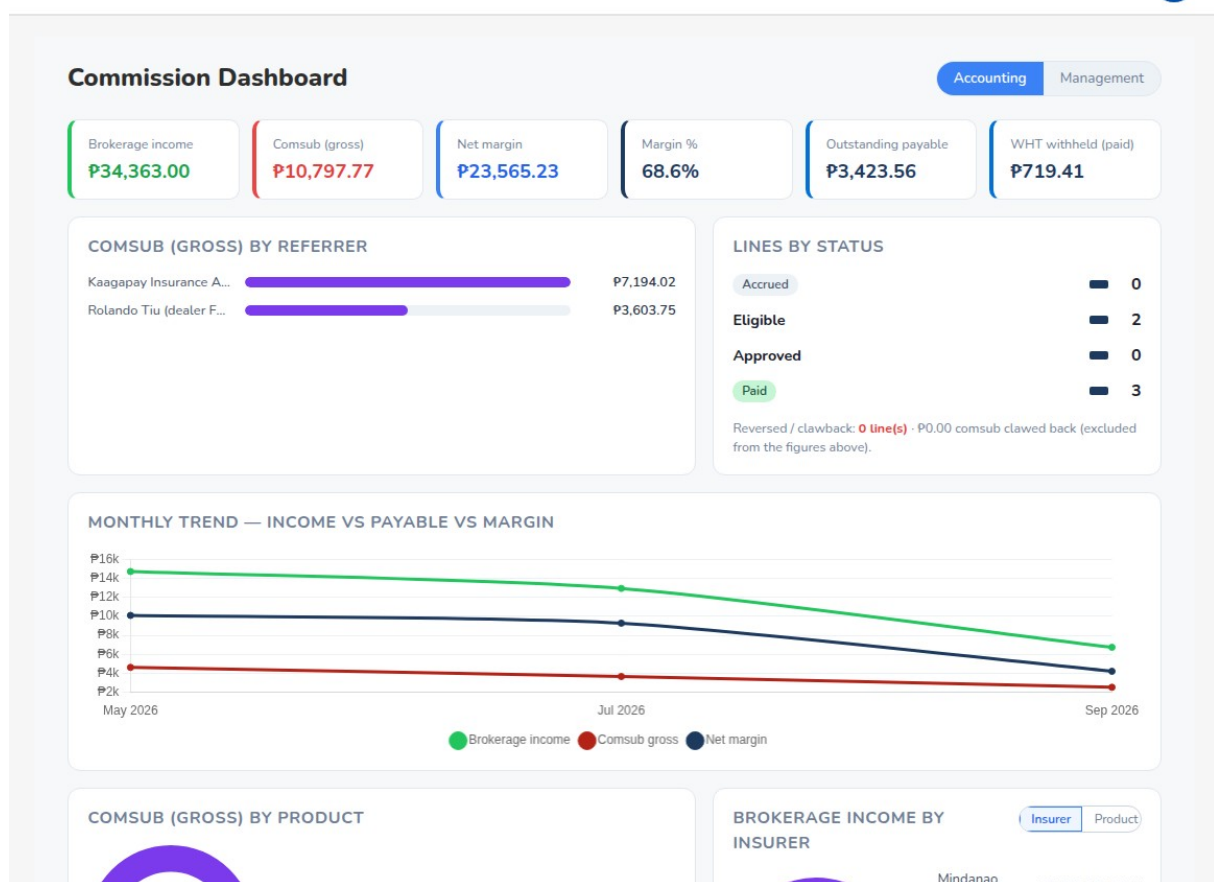

Aspect	Detail
Philippine specifics	Premium held for insurers kept apart from commission income; VAT and EWT on direct-bill commission; Form 2307 received from insurers
Personas	Accounting, Accounting Manager
Key reports	Remittance Summary, Due to Insurers by Co-insurer, Aged Payables to Insurers, Commission Receivable - Direct Bill
Controls	Initiator cannot approve; approval limits from the Authority Matrix; debit notes maker-checker; billing mode change refused once premium was collected or remitted
Integrations	Remittance statements and debit notes as PDF, CSV or XLSX; e-mail; transfers executed in the bank's own portal

5.15 Commission and referrers

What it does. Calculates the brokerage earned from insurers and the share paid to agents and referrers, and pays it when the premium is collected.

- Commission Rate Matrix by insurer, product, line and policy type with effective dates; insurer default rate; `commission.default_rate` (15%).
- Commission line statuses Accrued, Eligible, Approved, Paid, Reversed; clawback on return premium.

- Agents/Referrer Accounts with type (Agent, Sub-agent, External), level, net payable, withholding tax type and bank account; Generate payout creates the payout voucher.
- Commission Dashboard with accounting and management views.
- Overriding, profit and contingent commission from insurers (Commission > Insurer Overrides): agreements per insurer with basis production volume, loss ratio or growth, period, lines of business and tiers (slab or banded); computation per period from production and claims (or the insurer's claims figure); approval by a second user posts the receivable, commission income and output VAT; sales invoice to the insurer; settlement against the insurer's statement with cash, creditable withholding and any difference.

Commission Dashboard

Aspect	Detail
Philippine specifics	Withholding on comsub by payee type (commission.wht_rate_by_type: Agent 5%, Sub-agent 5%, External 10%); ATC per payee type
Personas	Accounting pays; Sales & Marketing views its commission
Key reports	Broker Commission Statement, Commission Dashboard
Controls	Payable only after full collection (commission.require_full_payment) and with a bank account on file; approval of lines and payout by a second user; no approval or payout to an agent or sub-agent without an IC licence in force (compliance.referrer_licence_check, block as delivered)
Integrations	Payout through Disbursement

5.16 Incentives

What it does. Rewards account executives who reach targets.

- Incentive Programs (INC-) by target metric: premium volume, policy count, renewal rate or conversion; base target, frequency, dates.
- Calculations per period (CALC-), Approvals (including bulk approve), Statement per person and month.
- Approved amounts accrued and paid through posting rules.

Aspect	Detail
Personas	System Administrator sets up programmes; Accounting calculates and pays; Sales & Marketing take part (incentive.eligible_roles)
Key reports	Incentive Results
Controls	Calculation batches approved by a second Accounting user; Accounting cannot change the programmes it pays

5.17 General ledger and journals

What it does. Keeps a double-entry general ledger fed by every operational event, with manual journals under approval.

- Posting rules turn each business event into journal lines through account roles mapped in Account Determination; Simulate before approval.
- Journal Voucher, Correction JV and Reversal JV with approval; Accounting Query; All Clients Accounting; Open Entry Matching and Un-Matching with write-off reasons and limits.
- Delivered Philippine broker chart of accounts, including Cash in Bank - Premium Trust Account (Clients' Money).
- Premium VAT, DST and LGT booked to their own accounts (accounting.split_premium_taxes).

Aspect	Detail
Personas	Accounting, Accounting Manager; System Administrator maintains posting rules
Key reports	Journal Register, General Ledger Detail, Trial Balance
Controls	Unbalanced journals, inactive accounts and closed periods refused; each journal points to its source document; changes to posting rules and account determination proposed by one user and approved by another (Configuration Approvals)
Integrations	Chart of accounts and opening balance upload templates

5.18 Period end

What it does. Runs the fiscal calendar, the month-end and year-end close and the financial statements.

- Period Management: periods Open, Soft-closed, Closed, Locked; adjustment period 13; go-live opening balances import.
- Month-End Close run (MEC-): accruals, recurring journals, commission deferral, FX revaluation and the close checklist with automatic and manual, blocking and warning items.

- Recurring Journals (RJV-) and accruals with auto-reversal on day 1 of the next period.
- Year-End Close (YEC-): pre-checks, adjustment journals in period 13, closing to retained earnings, opening balances of the next year; reversible until the first period of the next year is closed.
- Financial Statements: Income Statement, Balance Sheet and Trial Balance for any dates.

Month-End Close

Month-End Close

Aspect	Detail
Personas	Accounting prepares; Accounting Manager approves
Key reports	Income Statement, Balance Sheet, Trial Balance (Opening / Movement / Closing), Month-End Close Status
Controls	Close approval by a different user (accounting.period_close_requires_approval); postings in soft-closed periods only by the Accounting Manager; reopening needs remarks and is recorded
Integrations	Scheduled jobs for recurring journals, accrual reversal, period soft-close and close reminders (delivered switched off)

5.19 Bank reconciliation

What it does. Matches each bank statement with the cash account in the ledger, posts bank items not yet in the books and produces the monthly reconciliation statement.

- Statement import (CSV or XLSX) with formats BDO-SAMPLE, BPI-SAMPLE, MBT-SAMPLE and GENERIC, or entry by hand; balanced statement check; duplicate files refused.
- Auto-match with six rules (adjustment journals, reversals, amount and reference, amount and date window, one-to-many, many-to-one) and manual matching with treatment of differences.
- Create adjustment from a bank line using bank transaction types (charges, interest, final tax, returned cheque, direct credits); stale cheques after 180 days.
- Reconciliation (BRC-) prepared, approved and locked; reopen with remarks.

Bank Reconciliation workspace

Aspect	Detail
Philippine specifics	Layouts of BDO, BPI and Metrobank exports; returned cheques (DAIF, DAUD) cancel the receipt and reopen the bill
Personas	Accounting prepares; Accounting Manager approves
Key reports	Bank Reconciliation Statement, Outstanding Cheques, Deposits in Transit, Unmatched Bank Lines, Bank Book
Controls	Approver differs from preparer; month-end checklist looks for an approved reconciliation of each active account
Integrations	Bank statement files; no bank API

5.20 Insurer reconciliation

What it does. Imports insurers' statements of account and matches them with the broker's remittances, debit notes and policies.

- Statement types: premium remittance confirmations (broker-billed premium the insurer received) and commission statements (direct-bill commission the insurer recognises).
- Insurer Statement Formats map each insurer's CSV or XLSX columns.
- Matching per line, resolutions with adjustment journals, approval of the reconciliation.
- Differences report with the insurer's and the broker's premium, commission and amount side by side.

5.21 BIR tax

What it does. Prepares the BIR forms and working papers from the ledger.

- BIR Form 2307: Issued by us (tax withheld on payments to agents, referrers and suppliers, and on the supplier invoices of accounts payable) and Received (tax withheld by insurers and clients); certificates per payee and quarter numbered from the CWT series, printed on the BIR layout, issued one by one or for every payee of the quarter; cancel with a reason.
- VAT Summary: vatable revenue, output VAT, input VAT and net VAT payable per month or quarter, the working paper for the VAT return.
- SAWT, QAP, SLSP Sales and SLSP Purchases in the BIR column order, as CSV, Excel or PDF.
- Withholding Returns: 0619-E per month and 1601-EQ per quarter per ATC on the BIR layout (PDF and Excel), reconciled with the QAP and the ledger withholding accounts, with filing records (date filed, reference, amount paid, penalties, amended returns); annual 1604-E with the alphalist of payees (schedules 3 and 4).
- Percentage Tax 2551Q working paper for a non-VAT broker or agent (rate `bir.percentage_tax_rate`, default 3%).
- BIR DAT Files for the QAP, SAWT, SLSP sales and purchases and the 1604-E alphalist (BIR Alphalist Data Entry module v7.x and RELIEF layouts, version shown on screen).
- Sales Invoices under the EOPT Act and RR 7-2024 for commission and fees, with every required field, sequential numbering within the registered serial range, cancellation with a reason and payment acknowledgements as supplementary documents.
- E-Invoicing (EIS): e-invoice payloads, signing placeholder, outbox with status and retry, test mode with a fake provider, live adapter configured by settings; switched off until the broker's BIR certification.
- CAS Books and Documents: loose-leaf books per month with running page numbers, system description and controls, backup procedure, audit trail extract.
- Tax codes (Master > Finance > Taxation): VAT output and input 12%, zero-rated, exempt, expanded withholding with ATC (for example WI139, WC139, WI515), final withholding, DST, LGT, premium taxes, each with rate, GL account and effective date.

BIR Form 2307

Aspect	Detail
Philippine specifics	All of the above; BIR settings for the withholding agent's TIN, registered name and address
Personas	Accounting, Accounting Manager
Key reports	VAT Summary, SAWT, QAP, SLSP Sales, SLSP Purchases, BIR Form 2307 register, 0619-E, 1601-EQ, 1604-E, 2551Q, DAT files, sales book and the other loose-leaf books
Controls	Certificates kept and cancelled with a reason, not deleted
Integrations	DAT files for validation in the BIR tools; EIS connector (switched off until certification); the system does not file returns

5.22 Reinsurance

What it does. Records the treaties that protect large risks, the cessions under them, recoveries on claims and the reconciliation of reinsurer statements.

- Treaty master: quota share, surplus, excess of loss, stop loss; reinsurers, shares and period.
- Treaty Dashboard, Cession Tracking with Process Cession and Generate Bordereau, Claims Recovery, Reconciliation (variances above 1% for review), Analytics.

Aspect	Detail
Personas	Processing Team (treaties, cessions), Claims (recoveries), Accounting (reconciliation), System Administrator (master)
Key reports	Reinsurance Cession Register
Controls	New treaty approved by a second user (reinsurance.treaty_requires_approval); minimum reinsurer security rating A-
Integrations	Bordereaux and reconciliation files as CSV

5.23 Distribution channels and lead assignment

What it does. Records the dealers, financing banks and affinity partners that bring business, and gives every new prospect an account executive.

- Distribution Channels master: dealer groups and branches, financing banks and bank branches, affinity partners; hierarchy, referrer and comsub, mortgagee clause and letter addressee per bank. The channel is carried from the prospect to the quotation and the policy.
- Lead Assignment: rules by branch, line, source, category, channel and territory (Province, City / Municipality) with round robin, fewest open prospects or a fixed account executive; reassignment queue, single and bulk reassignment with history, team view by reporting line.
- Dealer Production report by dealer group and channel: prospects, quotations, policies, sum insured, premium and commission.

Aspect	Detail
Personas	Sales & Marketing (team view, prospects), sales managers and the lead assignment team (rules, queue), Processing and Operations (channels)
Controls	Permissions read / write:lead-assignment and read / write:channels; every assignment written to the prospect's history and the audit trail
Settings	leads.assignment_enabled, leads.assignment_fallback, leads.assignment_sla_hours, leads.assignment_notify, channels.inherit_from_lead, channels.default_mortgagee_clause

5.24 Motor programmes, fleets and marine open covers

What it does. Places motor and cargo business in bulk: brand-new vehicles sold by dealers, company fleets on one policy, and cargo shipments under an open cover.

- Dealer Programmes: terms per dealer and financing bank (insurer, rates, CTPL term, free or subsidised first year and who pays); the Dealer Sales upload creates the prospect, quotation and, if chosen, the policy with the bank as mortgagee; each payer billed its share; bank endorsement letter printed or e-mailed per sale or per batch.
- Fleet Schedules: one motor policy with a premium and CTPL per vehicle, upload of the vehicles, schedule PDF and Excel; vehicles added or deleted by endorsement at the pro-rata premium.
- Marine Open Covers: rate and limit per conveyance, mark-up and minimum premium; certificates printed per shipment; monthly or quarterly declarations billed on the open policy with the premium taxes, then collected and remitted as any bill.

Aspect	Detail
Philippine specifics	CTPL from the tariff of the vehicle class (3-year CTPL for new cars); premium taxes of the motor and marine lines from the tax engine
Personas	Sales & Marketing and Processing (programmes), Operations and Processing (fleets, open covers)
Ledger	Every bill raised (programme payers, fleet issue and endorsements, declarations) books the premium receivable, the amount due to the insurer and the commission through the posting rules
Uploads	Dealer Sales and Fleet Vehicles templates (Excel), validated row by row with the reason of each rejection

5.25 Facultative reinsurance placement

What it does. Supports the broker acting as reinsurance broker for an insurer that cedes part of a risk to the facultative market.

- Slip with the risk, the 100% terms, share offered, reinsurance commission and brokerage; reinsurers approached (security rating gate) and their lines; placed when the lines reach 100%.
- Binding posts the premium due from the cedant, the net premium due to each reinsurer and the brokerage income (posting rule ri.facultative.bind); premium received and paid recorded with their journals.
- Slip, cover note, debit note and credit notes as PDF; bordereau per period, kept as a document.

5.26 Client comparison report and marketing campaigns

What it does. Gives the client a branded comparison of the insurers' offers with the broker's recommendation, and e-mails offers to consenting clients and prospects.

- Comparison Reports from a request for quotation or from quotations: options ranked by premium, highlights, the recommended option and the reasons, disclaimer; printed on the letterhead, e-mailed as PDF, the client's choice recorded. Commission is never shown.
- Campaigns: segments (clients, prospects, line, territory, channel, renewals due), HTML templates with placeholders, send now or scheduled, only to people whose marketing consent is in force; opt-out link per e-mail recorded in the consent register; results by delivery, exclusion reason, opt-out and conversion.

5.27 Report Builder and BI extract

What it does. Answers ad hoc questions without a new report being programmed.

- Curated datasets (Policies, Clients, Bills, Claims, Commissions) with columns, filters, grouping and sort; totals of the numeric columns; export to Excel.
- Saved reports, private or shared with roles; each user sees only the rows of their data scope.
- Scheduled BI extract: one CSV per dataset written daily to file storage for the BI tool or data warehouse.

5.28 Product Configurator

What it does. Holds the products the broker places and the rules that price them, including the motor tariff.

- Product Templates with versions and statuses (Draft, Active, Inactive, Retired); motor template MOT-003-2025 with the CTPL and Auto Passenger PA tariff per vehicle class.
- Coverage Builder, Rating Engine with Test Calculator, Acceptance Rules, Document Manager, Market Mapping, Risk Mapping, Product Analytics.

- Rules applied in the business flow: the governing template of a quotation, broker slip, placement or policy (the template named on the record, else the motor pricing template `motor.pricing_template_code`, else the newest active template of the product or line) supplies its rating factors (multiplicative, discount or additive) and acceptance rules. A rule tests a risk field (vehicle age, use, class, sum insured, driver age, claims, fleet size, members, flood-prone location and others) and accepts, refers, declines or loads; a referred quotation waits for a user of the rule's authority role within the Underwriting referral limit of the Authority Matrix.
- Market Mapping restricts the insurers approached for a product when `product.market_panel_enforced` is on.
- Document templates per product (policy schedule, CTPL certificate, quotation slip, member enrolment) with a text layout of merge fields such as `{{PolicyNumber}}` and generated blocks such as `{{#Premium}}`, printed on the letterhead.
- Quote wizard covers and risk fields taken from the Product Configurator: the quote wizard (Operations > Sales & Marketing > Quotations, Start quote) offers the covers of the governing template's Coverage Builder (a mandatory cover always included, an optional cover ticked or unticked, each priced on its "Priced on quotation as" premium) and asks for the risk fields its acceptance rules and rating factors test (driver date of birth or age, claims in the last three years, fair market value, number of members), so every rule is evaluated; `underwriting.require_rule_fields` makes them compulsory on the server too.

Product Templates

Product Configurator • Product Templates

+ Create Template

① The template marked In use is the one the business flow applies to its product: motor quotations are priced with the motor pricing template; its acceptance rules, rating factors, insurer market and document templates take effect on quotations, Requests for Quotation, placements and printed documents.

Product Templates

Aspect	Detail
Philippine specifics	Delivered CTPL tariff per vehicle class, for example private cars PHP 610.40 (1 year) and PHP 1,660.40 (3 years), confirmed on 29 September 2026; Philippine lines of business and products
Personas	Processing Team maintains; Sales & Marketing and Operations view
Controls	Only active templates are used by the quotation screens; referrals approved within the authority limit; unknown merge fields refused when a layout is saved

5.29 Reports

What it does. Produces every report from one report screen with criteria, filters, preview and download.

- 39 catalogue reports: operational (11), financial (16), tax (5), reconciliation (5), management (2).
- Output on screen, Excel with a parameters sheet, CSV, and PDF on the company letterhead; up to 50,000 rows per file.
- Scheduled delivery by e-mail; the Daily reports job produces the Production Register, Collection Report and Claims Position every morning.
- Every generated file recorded in the audit trail.

Reports

Reports • All Reports

Q Search reports

Operational Reports

Production Register

Policies inception in the period with premium, commission, new business / renewal flag; grouped by agent, insurer or branch per Report Criteria.

Claims Position

Claims reported in the period with estimate, approved and settled amounts, age and ageing bucket. Criteria: All, Open, Settled, Rejected, Aging (open claims by ageing bucket).

Renewal Retention

Renewals due in the period with outcome (retained, lost, pending), old and new premium and the retention rate.

Remittance Summary

Premium remittances to insurers in the period: gross premium, commission retained and net due, by status.

Broker Commission Statement

Commission accrued in the period per agent and policy: basis, rate, gross, withholding tax and net, with payment status.

Premium by Product / Month / Insurer

Policy count, sum insured, premium and commission by month, product and insurer (criteria picks the dimension).

New Business vs Renewals

Policies and premium split into new business and renewals per month (or per agent).

Claims Ageing

Open claims by ageing bucket (optionally per insurer or agent) with estimate and approved amounts.

Lead Conversion Funnel

Leads created in the period by stage with share and overall conversion rate.

Placement Pipeline

Broker slips and placement slips created in the period with status, lead insurer, sum insured, premium and age (open slips by age bucket).

Market Response

Insurers approached on broker slips in the period: offers, declines, pending, response rate, average response days, offers taken and hit ratio (offers taken / offers made).

Co-insurance Register

Co-insured policies inception in the period: every participating insurer with its role, share, premium, commission, premium taxes and premium due as booked on the bills.

Dealer Production

Prospects, quotations and policies brought by each dealer, financing bank and affinity partner, with premium and commission, rolled up to the dealer group.

Financial Reports

Reports > All Reports

Group	Reports
Operational	Production Register, Claims Position, Renewal Retention, Remittance Summary, Broker Commission Statement, Claims Ageing, Lead Conversion Funnel, Placement Pipeline, Market Response, Reinsurance Cession Register, Co-insurance Register

Tax	VAT Summary, SAWT, QAP, SLSP Sales, SLSP Purchases
Reconciliation	Bank Reconciliation Statement, Outstanding Cheques, Deposits in Transit, Unmatched Bank Lines, Bank Book
Management	Premium by Product / Month / Insurer, New Business vs Renewals

Aspect	Detail
Personas	Each role runs the reports of its area
Controls	read: reports and role checks per report; download links valid 72 hours; generated files kept 90 days
Integrations	Scheduled e-mail delivery

5.30 Notifications and e-mail

What it does. Tells users what needs their action and sends documents to clients, insurers and staff.

- In-app notifications per user with a bell and a notification page, for quotations, policy issue, billing and collection, servicing, claims, renewals, remittance and commission, reinsurance, finance and period end, and access control.
- Approval notifications for every maker-checker flow: the people who can approve are told of the request, and the maker hears of the approval or rejection with the reason. One switch: `notification.approval_requests`.
- E-mails to clients (quotation approval, share, policy issued, endorsement, renewal notices and reminders, payment reminder, collection follow-up, official receipt, premium invoice), to insurers and agents (quotation, broker slip, placement slip, Preliminary Loss Advice, commission debit note, remittance statements) and to staff (scheduled report, password reset code).
- Attachments generated as PDF when the message is sent: official receipt, premium invoice, commission debit note, policy schedule; size guard `email.max_attachment_mb`.
- E-mail Outbox shows every queued message with status, attempts and attachment names; failed messages can be retried.

92BA

Master > E-mail Outbox

E-mail Outbox

Refresh

E-mail sending is not configured, so queued messages stay here and are not delivered. The mail server (SMTP_URL) is not set on the server. Send e-mails is switched off (System Settings, Notification).

E-mail Outbox

Aspect	Detail
Personas	Every role receives notifications; System Administrator manages templates and the outbox
Controls	E-mail sending off until "Send e-mails" is switched on; templates with merge fields in Master > Configuration
Integrations	SMTP mailbox (for example Office 365 on port 587 with STARTTLS); queue sent every 5 minutes, up to 5 attempts

5.31 Integrations: SMS, CTPL authentication, insurers and bank files

What it does. Connects BrokerVerse to third parties through one integration framework, each connection with a test mode, a file or manual fallback that completes the process today, and a monitor with retry and resend.

- **SMS and Viber.** Renewal notices, payment reminders and claim updates by SMS from templates with placeholders, after a consent check against the client's recorded consents. Provider adapters for a generic HTTP SMS API with Semaphore-style and Globe Labs-style presets; Viber business messages optional behind the same interface.
- **CTPL authentication.** COC series per insurer and branch, the next COC number allocated at issue, the authentication request to the IC-accredited provider, the authentication code stored and printed on the policy schedule, the LTO feed when needed, the code keyed in by hand when the provider's portal was used, and the unauthenticated CTPL report.
- **Insurer systems.** A mapping per insurer (codes, request and answer fields, claim statuses) for the policy issuance request, policy and premium data and claim status; claim status by CSV file and premium data by the insurer statement import when an insurer has no API.
- **Bank payment files.** Insurer remittances and referrer payouts paid by bulk credit, InstaPay or PESONet files written from a layout per bank (fixed width or delimited); maker-checker approval of the batch; the bank's status file marks each payment paid (payment journal posted) or rejected. Starter layouts for BDO, BPI, Metrobank, Landbank and UnionBank, to be validated with each bank during onboarding.
- **Integrations monitor.** Connectors with mode, endpoint and credentials named by environment variable (never stored), the outbox with status, attempts, last error, retry with backoff, resend and cancel, and the inbox of pushed messages and imported files.

Aspect	Detail
Personas	System Administrator (connectors, templates, insurer mappings); Processing and Operations (CTPL); Accounting (bank payment files and layouts)
Controls	Test mode until the provider is contracted; live refused while a credential variable or the endpoint is missing; signed inbound messages; maker-checker and Authority Matrix on bank batches; audit trail on every change and resend
Integrations	SMS gateway, Viber aggregator, CTPL authentication provider, LTO, insurer APIs, bank upload portals; certification of each interface is done with the partner during onboarding

5.32 Data privacy

What it does. Supports the broker's obligations under the Data Privacy Act: consent, data subject requests, access and portability, and erasure once records no longer have to be kept.

- Consent per purpose for each client and prospect: processing (privacy notice acknowledged), marketing, and sharing with insurers and reinsurers for placement and claims; granted or refused, channel (Form, E-mail, Phone, Portal, In person), notice version (privacy.notice_version) and evidence. A withdrawal is stamped on the record it ends; the history is never deleted.
- Consent Register across clients and prospects with filters by purpose, status, channel and dates.
- Data Subject Requests register (DSR-): access, rectification, erasure or blocking, objection, portability and withdrawal of consent; due date from privacy.request_due_days (15 calendar days); statuses open, in progress, completed, rejected; assignee and outcome.
- Personal data export of a client or prospect, as JSON or Excel, noted on the request it answers.
- Anonymisation of a client or prospect with a dry run first: personal fields are overwritten in the party, its prospects, policies, quotations, claims and slips, while amounts, numbers and dates stay for the books.
- Overdue request reminder job (delivered switched off) notifies the data privacy team.
- Breach Register (Compliance > Data Privacy (NPC)): incidents (PDB-), assessment against the NPC criteria, the 72-hour clock (privacy.breach_notify_hours) with hourly reminders, NPC and data subject notifications, closure and the annual security incident report.
- Masking of personal identifiers by role: users without **View full personal identifiers** (view:pii) see TIN, ID numbers, mobile, e-mail, bank account and birth date partially masked on screens and in every Excel, CSV and PDF listing; unmasking on request is audited (privacy.masking_enabled, privacy.pii_reveal_mode).
- Field encryption at rest of TIN, government ID numbers and bank account numbers with the environment key (PII_ENCRYPTION_KEY), exact-value search kept.
- Masking tool for production copies used outside production (npm run mask:data): consistent pseudonyms, verification, refusal on production, evidence for the DPO.

Aspect	Detail
Philippine specifics	Data Privacy Act of 2012 and NPC rules; retention of insurance and tax records
Personas	System Administrator and Operations hold the privacy permissions (read:privacy, write:privacy); the broker's DPO works the registers
Controls	Anonymisation refused while policies are in force, bills or claims are open, commission is unpaid, endorsements are open, or within privacy.retention_years (10 years) after the last policy expiry; every action in the audit trail
Integrations	Excel export; masking tool for test and training copies

5.33 AML/CFT compliance

What it does. Supports the broker's programme as a covered person under the AMLA (RA 9160 as amended): customer due diligence before the first policy, risk-based rating with enhanced due diligence, sanctions, PEP and negative list screening, covered and suspicious transaction monitoring, AML cases and the CTR and STR files for the AMLC.

- Client onboarding before the first policy (Operations > Clients > Onboard client): individual or juridical, government ID, Philippine mobile number and TIN checked, PSGC address, authorised signatories with their board resolution or secretary's certificate, beneficial owners, KYC documents.
- Customer risk rating Low, Normal or High from configurable factors (client type, nationality, PEP, line, payment mode, premium size, geography) at onboarding, at every policy issue and at the KYC refresh; compliance officer override; KYC refresh schedule per rating with the due list.
- EDD reviews (EDD-) for High-risk clients, prepared and approved by a compliance officer other than the preparer; no policy to a High-risk client without one (setting).
- Versioned screening lists (UN consolidated list XML, AMLC designations, PEP and internal lists in CSV or XLSX), fuzzy name matching with a score threshold, screening at onboarding, policy issue and payouts, rescreen after every list update, hits queue with clear, escalate and confirm; commercial provider adapter with sandbox mode and request log.
- Transaction monitoring rules (covered cash above PHP 500,000 in one banking day, structuring, early cancellation, third-party payouts, overpayment refunds, payer differs) with alerts (AMA-), cases (AMC-) with due dates in working days, and CTR and STR files (AMR-, layout BV-AMLC-TXN 1.0).
- AML dashboard; Compliance Officer role and Compliance menu.

Aspect	Detail
Philippine specifics	AMLA as amended, 2018 IRR, AMLC registration and reporting; thresholds and filing days are settings the compliance officer confirms
Personas	Compliance Officer (read:aml, write:aml, approve:aml); Operations prepares EDD reviews; client roles onboard clients (write:clients)
Controls	Policy issue and payouts stopped by an undecided or confirmed match; maker-checker on EDD approval; every decision with a reason in the audit trail; AML records kept <code>aml.record_retention_years</code> (5) years
Integrations	List files (XML, CSV, XLSX); commercial screening provider API by configuration; report files filed by the broker in the AMLC portal

5.34 Insurance Commission compliance and complaints

What it does. Keeps the registers and reports the broker owes the Insurance Commission and handles complaints under RA 11765.

- Licence Register: licences of the firm, officers, licensed individuals, agents, sub-agents and referrers with renewal status, documents, expiry calendar and

reminders at 90, 60, 30, 15 and 7 days; commission held for an agent without a licence in force.

- Fit and Proper: declarations, documents, review outcome and next review of directors and officers.
- Insurer Authority: each insurer's IC certificate of authority and validity, checked when a request for quotation or firm order is sent and when a policy is issued (compliance.insurer_authority_check warn or block).
- Complaints: intake by channel and category, acknowledgement and resolution deadlines (2, 7 or 45 days), automatic escalation, acknowledgement and resolution letters, referral to the IC, ageing and the regulator report.
- IC Annual Statement: workbook of the annual statement from the ledger and production with checks, a configurable account mapping and the accountant confirmation sheet; IC Production Report by insurer and IC line.

Aspect	Detail
Philippine specifics	Insurance Code, IC rules on licensing, fit and proper and complaints handling; RA 11765
Personas	Users with read:compliance and write:compliance (System Administrator, Operations; Accounting reads); complaints handlers (write:complaints) and complaints officers (approve:complaints)
Controls	Daily compliance-reminders and complaints-deadlines jobs; every step in the audit trail
Integrations	Excel exports for the regulator

5.35 My Work, menu and help

What it does. Gives each user one worklist and a menu organised by task, with help on every screen.

- My Work (Operations > My Work): My Items by category (quotations, requests for quotation, placements, renewals, premiums due, collection follow-ups, endorsements, claims, approvals, missing documents, tasks), My Team by reporting line with reassignment, My Tasks with reminders, Calendar; overdue and due-today counts.
- Side menu in business order with Master in sections (Organization, Insurance, Location, Employees, Users and Access, Finance, System, Data Privacy, Go-Live and Data), menu search and skeleton loading of lists.
- Help panel (**F1**): the manual section of the screen, the user manual PDF, the support desk's contacts, raise a support ticket, About BrokerVerse.

5.36 Philippine reference masters

What it does. Delivers the reference data a Philippine broker needs.

- Geography of the PSGC (2Q 2026): regions, provinces (the field is Province), cities and municipalities with their class and ZIP code, barangays on the address forms.
- Philippine banks, government ID types, salutations, national holidays (used for working-day deadlines) and the list of insurers licensed by the IC.

5.37 Go-live data workbench and environments

What it does. Loads the broker's go-live data, proves that environments hold the same configuration, and keeps test and personal data where they belong.

- Go-Live Data Load: configuration workbook and migration workbook (clients, in-force policies, open receivables, open claims, GL opening balances); blank template or current data; upload and validate as a trial run; errors workbook; load in one transaction; reconciliation of the migration; history; go-live lock (golive.locked).
- Compare environments: a configuration export against this environment, or two exports against each other; result Mirrored or Differences found, field by field, with environment-specific fields listed apart; comparison workbook; npm run compare:environments for the release pipeline.
- Transaction reset (npm run reset:transactions): removes test transactions before go-live, keeps masters, settings and users, refused after the go-live lock.
- Data masking of production copies (npm run mask:data, with --remark-copy and --register-production).
- Release pipeline: one build promoted through Dev, SIT, UAT, Pre-Prod and Production with approvals, backup, forward-only migrations, smoke test and automatic rollback.
- Audit Trail screen (Master > System > Audit Trail): every audited action by record type, record ID, user and dates.

5.38 Branding and e-signatures

What it does. Presents the broker's brand on screens, documents, reports and e-mails, and signs documents with captured signatures.

- Theme and Branding (Master > System Settings): theme presets or custom colours with a contrast check, sign-in picture, document and report colours and footer, branded e-mail layout, logo and favicon; changes apply without a rebuild.
- Brand packs export and import the whole branding between environments; a client brand pack (for example the Toyota Insurance Services pack) carries the marks of a client of iorta TechNXT and is applied only in that client's environments, under the client's contract with iorta TechNXT, which covers the use of its marks there.
- E-signatures of company signatories and of users (captured by the user), versioned, with consent recorded and revocation; mapped per document type (quotation slip, policy schedule, endorsement, official receipt, payment voucher, debit note, statement, journal voucher, claim letter); drafts print UNSIGNED DRAFT.

5.39 Administration, security and configuration

What it does. Sets up the broker's organisation, reference data, users and rules, and keeps the record of who did what.

- Masters: Company (letterhead, TIN, IC licence number), Branch, Insurance Company (credit and remittance terms, billing mode, placement and claims e-mails, IC certificate of authority), Line of Business, Product, Cover, Signatories, Vehicle, locations, designations and hierarchy, finance masters. Staff details (branch, designation, reporting to) are on the user record.
- Uploads for masters and go-live data from 74 templates (10 MB per file, 20,000 rows).
- Users and Access: User, Role, User Access Matrix, Role Permissions, Authority Matrix, Delegations, Segregation of Duties, Access Reviews.
- Master > Configuration: business parameters by business area, applied at once and audited; Master > Document Numbering with 61 series; Master > Schedules with run now and history; Master > System Settings with Theme and Branding.
- Audit Trail of every create, update, approval, report run and sign-in, with before and after values.

Master > Users and Access > Authority Matrix

Authority Matrix

Aspect	Detail
Personas	System Administrator
Controls	Only a System Administrator grants that role; nobody changes their own role; new authority limits approved by another administrator; SoD rules checked at role assignment; dormant accounts deactivated after 90 days
Integrations	User provisioning from a template or the configuration workbook

6. OOTB scope and optional extras

6.1 What the OOTB edition includes

The OOTB edition is the product as delivered, fitted to the broker by configuration and master data, not by code changes.

Included in OOTB	Notes
All modules in chapter 5	Delivered screens, workflows, reports and printed documents
Configuration and master data	Company, users, insurers, products and tariff, commission, taxes, chart of accounts, posting rules, number series, approvals, schedules, e-mail texts
Standard integrations	SMTP e-mail, bank statement files, insurer statement files, PayMongo and Dragonpay payment links; adapters with test mode for SMS and Viber, CTPL authentication and the LTO feed, insurer APIs, bank payment files, the BIR EIS and a screening provider (certification with each partner during onboarding)
Go-live data	Masters, in-force policies and clients, open receivables, GL opening balances through the delivered templates
Implementation	Discovery, configuration, mock loads, SIT, UAT support, training per role, cutover, hypercare to the first month-end close
Documentation	User manual, role decks, reports book, architecture and security, compliance matrix, data migration, training and support documents

6.2 Optional extras and change requests

Customisation is outside the OOTB scope. A requirement that cannot be met by configuration, master data or a change in procedure is recorded as a gap and handled through a change request: the broker describes the need, iorta TechNXT estimates the effort, and the steering committee approves it before any work starts.

Outside OOTB, available as a change request or optional service	Examples
Customisation	Changes to screens, workflows, printed documents or the database; new reports
New integrations	Core banking, accounting packages, BIR eFPS or eBIRForms, IC systems, other payment gateways; a provider whose protocol the delivered adapters (SMS, CTPL, insurer API, bank file) cannot be configured for
Data services	Data cleansing and enrichment, extraction from the old system, migration of closed policies, history and documents, more than one fiscal year
Additional environments and hosting	Extra test or training environments; hosting by iorta TechNXT on AWS, Azure or a local partner
Additional training	Training beyond the agreed curriculum, users added after go-live
Additional lines of business after go-live	Products, rating, documents and test cases for a new line
Translation	Filipino screens (no translation file in this release)

Prices of optional services and day rates for change requests are in the commercial proposal.

6.3 What remains with the broker

- Registrations and filings: BIR returns and alphalists, registration of the computerized accounting system and of invoices and receipts, IC reports, NPC registration and breach notifications, AMLC reports.
- Confirmation of tax rates, ATC and GL accounts by the broker's tax adviser, and of the motor tariff with the insurers.
- Retention schedules, privacy notice and the privacy management programme; policies for credit control and the premium trust account.

7. Non-functional capabilities

7.1 Security

Area	Capability
Authentication	Named users only; bcrypt passwords; minimum 8 characters with four character classes, history of 5, expiry 90 days; lockout after 5 failures; sign-in rate limits
Two-step verification	TOTP built in, compulsory per role (<code>security.require_2fa_roles</code>); secrets encrypted with AES-256-GCM
Sessions	Access token 30 minutes, refresh token rotated on use with reuse detection; idle sign-out after 30 minutes; sessions ended on password or role change
Authorisation	Eight roles, deny by default; permission checked by the server on every route; record scope for scoped roles; masking of personal identifiers without <code>view:pii</code>
Controls	Maker-checker, Authority Matrix, Delegations, Segregation of Duties, Access Reviews
Application security	Parameterised SQL, request validation, security headers, upload type check by file content, signed document links valid 30 minutes, CSV formula-injection guard; mapped to the OWASP Top 10 (2021)
Production start-up checks	The API refuses to start with weak or missing secrets, <code>CORS_ORIGINS=*</code> or localhost addresses

7.2 Privacy

Area	Capability
Consent and rights	Consent Register, Data Subject Requests, personal data export, anonymisation (chapter 5)
Minimisation	KYC fields required for motor only by default (<code>policy.kyc_required_fields</code>)
Retention	Housekeeping deletes operational logs after their retention days; business records and the audit trail are kept; anonymisation after <code>privacy.retention_years</code>
Payment cards	Card details are entered on the gateway's page only
Encryption	TIN, ID numbers and bank account numbers encrypted at rest (<code>PII_ENCRYPTION_KEY</code>); two-step secrets encrypted
Test data	Production copies masked before use outside production; verification and DPO evidence
Breaches	Breach register with the 72-hour NPC deadline

7.3 Availability and recovery

Area	Capability
Design	Stateless API; any instance serves any request; scheduled jobs run once across instances; graceful shutdown
Health checks	<code>/api/health</code> (database and pending migrations) and <code>/api/health/live</code>
Recommended topology	Two or more API instances across zones, managed PostgreSQL with standby, shared file store
Recommended recovery objectives	API or database instance failure: RPO 0, RTO under 15 minutes; logical corruption: RPO 15 minutes or less, RTO 4 hours or less; regional outage: 24 hours
Backups (recommended)	Automated database backups with point-in-time restore for 35 days, monthly copies to a second region, restore tests quarterly

7.4 Performance and capacity

Area	Capability
Observed in the release verification	2,168 API calls with database writes in 29 seconds, about 13 ms per call, on a single server started with the production settings; every screen loaded within 2.6 seconds
Reference sizing	200 named users, 80 concurrent and 50,000 policies a year on two API instances of 1 vCPU and 2 GB and a database of 2 vCPU and 8 GB
Limits	Reports up to 50,000 rows per file; imports up to 20,000 rows per file
Recommended	A load test with the broker's concurrent users and month-end volumes on the production-sized server before go-live

7.5 Audit and traceability

Area	Capability
Audit trail	Every create, update, approval, report run and sign-in with before and after values, user, IP and time; kept by default
Document control	61 number series; financial documents cancelled or reversed, never deleted
Period control	Open, soft-closed, closed and locked periods; reopening recorded with remarks
History	Claim field changes and status history, bank reconciliation history, remittance approvals, sign-in history

7.6 Usability and localisation

- Browser application, no installation on user devices; Nunito font bundled.
- English screens; Philippine formats for money, dates, mobile numbers, ZIP codes and IDs; business time zone Asia/Manila.
- Lists paged by the server (20, 50 or 100 rows per page) with search and filters, so long lists open quickly; add and edit forms as side panels; status tags by colour.

7.7 Maintainability and interfaces

- React 18, Node.js 22, PostgreSQL 16; 13 direct runtime dependencies in the API, all under permissive licences.
- 868 API routes listed in OpenAPI, a Postman collection and an Excel touchpoint workbook from screen to route.
- Database migrations applied on start under a lock; migrations only add to the schema.
- Automated backend tests against a real PostgreSQL database on every pull request.

8. Deployment and support

8.1 Deployment options

Option	Form	Data location
AWS	S3 and CloudFront, API containers behind a load balancer, RDS for PostgreSQL Multi-AZ, EFS file store	Singapore (ap-southeast-1)
Microsoft Azure	Storage static website with Front Door, Container Apps, PostgreSQL Flexible Server, Azure Files	Singapore (Southeast Asia)
Local partner	Virtual machines in a Philippine data centre, PostgreSQL primary and standby, NFS file store	Philippines
On-premise	Broker's servers with Docker or Node.js under PM2, nginx reverse proxy	Philippines, broker's site

Hosting in Singapore is a cross-border transfer under the Data Privacy Act, which the broker documents and covers by contract. A broker that wants the system of record in the Philippines chooses a local partner or on-premise.

8.2 Implementation

Size	Typical profile	Duration to hypercare exit	Go-live
Small	One office, up to 25 users, up to 10 insurers, up to 5,000 in-force policies	8 weeks	Start of week 7
Medium	Up to 3 offices, 26 to 100 users, up to 25 insurers, up to 25,000 in-force policies	12 weeks	Start of week 10
Large	More than 3 offices, more than 100 users, more than 25,000 in-force policies	16 to 20 weeks	Start of week 15 (20-week plan)

Phases: mobilisation, discovery and fit-gap, environment set-up, configuration, data migration, integrations, training, system integration test, user acceptance test, cutover, go-live and hypercare until the first month-end close is done.

8.3 Support

Level	Who	Scope
L1	Broker key users and System Administrator	How-to questions, users and passwords, settings and master data, logging tickets with evidence
L2	iorta TechNXT application support	Triage, reproduction, analysis, configuration and data corrections under change control, workarounds
L3	iorta TechNXT engineering	Code defects, performance, infrastructure, security incidents, root-cause analysis, releases

Severity	First response	Restore or workaround
P1 Critical	30 minutes	4 service hours
P2 High	2 service hours	2 business days
P3 Medium	1 business day	5 business days
P4 Low	2 business days	Planned with the broker

Standard support runs 8:00 to 18:00 Philippine time, Monday to Friday, except regular holidays; 24 x 7 cover for P1 is an option. These targets are the iorta TechNXT standard proposal and are fixed in the support agreement.

9. Feature checklist for vendor comparison

The table lists capabilities a Philippine non-life broker typically compares. The BrokerVerse column states what the OOTB edition does: **Yes** (delivered), **Configurable** (delivered, set by configuration), **Partial** (part of the need is met, see the note) or **No** (not in OOTB, available as a change request). The last two columns are left for the broker's evaluation.

#	Capability	BrokerVerse OOTB	Note	Vendor B	Vendor C
1	Prospects with bulk upload	Yes			
2	Quick quote of packaged products from insurer rate tables	Yes			
3	Side-by-side comparison of insurers for a client	Yes			
4	Motor quotation with CTPL tariff per vehicle class	Yes			
5	Server-side re-pricing of every quotation	Yes			
6	Online client approval of quotations without sign-in	Yes			
7	Broker slip to several insurers with offers and declines	Yes			
8	Offer comparison with best offer and market capacity	Yes			
9	Co-insurance with lead and shares totalling 100%	Yes			
10	Placement slip with confirmation per insurer	Yes			
11	Placement journey rules per line of business	Configurable			
12	Record a policy issued by the insurer	Yes			
13	KYC capture with government ID for motor	Configurable			
14	Broker billed and direct bill per policy	Yes			
15	Endorsements with re-pricing and return premium	Yes			
16	Cancellation full, partial and pro-rata	Yes			
17	Claims with insurer notice, adjuster and settlement approval	Yes			
18	Claims paid through the broker with recoveries by share	Yes			
19	Renewal pipeline with notices at 60, 30 and 15 days	Configurable			
20	At-risk scoring and win-back campaigns	Yes			
21	Premium invoices and official receipts on letterhead	Yes			
22	Receipt and invoice e-mailed with PDF attachment	Yes			
23	Online payment links with automatic receipt	Yes	PayMongo, Dragonpay		
24	Collections ageing and automatic reminders	Yes			
25	Instalment plans and premium warranty monitor	Yes			
26	Client credit limits	Yes			
27	Remittance to insurers net of commission, by co-insurer share	Yes			
28	Remittance approval limits per role or user in the Authority Matrix	Configurable			
29	Direct bill commission debit notes with VAT and EWT	Yes			
30	Commission rate matrix by insurer, product and policy type	Yes			

#	Capability	BrokerVerse OOTB	Note	Vendor B	Vendor C
31	Referrer commission payable on full collection, less WHT	Configurable			
32	Incentive programmes for account executives	Yes			
33	Double-entry general ledger fed by posting rules	Yes			
34	Journal, correction and reversal vouchers with approval	Yes			
35	Month-end close with checklist and approval	Yes			
36	Year-end close and financial statements	Yes			
37	Bank statement import and automatic matching	Yes			
38	Bank reconciliation statement with approval	Yes			
39	Insurer statement reconciliation with differences report	Yes			
40	Premium taxes DST, LGT, VAT and FST per line	Configurable			
41	BIR Form 2307 issued and received	Yes			
42	VAT Summary, SAWT, QAP, SLSP	Yes			
43	Direct filing to BIR eFPS or eBIRForms	No			
44	Reinsurance treaties, cessions, bordereaux and recoveries	Yes			
45	Product configurator with tariff and rating rules	Yes			
46	39 reports in Excel, CSV and PDF with scheduled e-mail	Yes			
47	Role dashboards	Yes			
48	In-app notifications, including every approval request and decision	Yes			
49	Seven roles with server-side permission checks	Yes			
50	Two-step verification by role	Configurable			
51	Authority matrix, delegations, segregation of duties, access reviews	Yes			
52	Audit trail with before and after values	Yes			
53	Consent register per purpose	Yes			
54	Data subject request register with due dates	Yes			
55	Personal data export and anonymisation with retention rules	Yes			
56	Field-level encryption of personal identifiers	Yes	TIN, ID and bank account numbers		
57	Insurer system integration by API	Configurable	Mapping per insurer; test mode until the insurer certifies		
58	Bank payment file generation	Configurable	Starter layouts validated with each bank		
59	SMS notifications	Configurable	SMS gateway contract; optional Viber		
60	IC-format regulatory reports	Yes	Annual statement workbook and production report; accountant confirms		
61	AML transaction monitoring and sanctions	Yes	Lists loaded by		

#	Capability	BrokerVerse OOTB	Note	Vendor B	Vendor C
	screening		the broker; provider optional		
62	Filipino user interface	No	English		
63	Hosting on AWS, Azure, a Philippine partner or on-premise	Yes			
64	Open API documentation	Yes	OpenAPI		
65	Lead assignment rules by territory, line and source, with reassignment queue	Yes			
66	Dealer, bank and affinity channels with production report	Yes			
67	Brand-new vehicle programmes with dealer upload and bank endorsement letter	Yes			
68	Fleet policy with per-vehicle premium and CTPL, pro-rata endorsements	Yes			
69	Marine open cover with certificates and declarations	Yes			
70	Facultative reinsurance placement with slip and bordereau	Yes			
71	Client comparison and recommendation report	Yes			
72	E-mail marketing campaigns to consenting clients with opt-out	Yes	Sent through the e-mail outbox		
73	Ad hoc report builder with saved, shared reports and BI extract	Yes	CSV extract to file storage		
74	Licence register with commission block for unlicensed agents	Yes			
75	Complaints register with deadlines and regulator report (RA 11765)	Yes			
76	Personal data breach register with the 72-hour clock	Yes			
77	Masking of personal data on screens and exports by role	Yes			
78	CTPL COC authentication and LTO feed	Configurable	Provider contract		
79	Cover notes, computed cancellation (pro-rata, short-period)	Yes			
80	Post-dated cheque register and instalment invoices	Yes			
81	Claim document checklist and motor repair letters of authority	Yes			
82	Accounts payable and fixed assets with depreciation	Yes			
83	BIR 0619-E, 1601-EQ, 1604-E, 2551Q, DAT files, EOPT invoices, CAS books	Yes	Filing by the broker		
84	Go-live data workbench with reconciliation and environment comparison	Yes			
85	Theme, branded documents and e-signatures	Yes			
86	Philippine PSGC geography and reference masters	Yes			
87	One worklist per user (My Work)	Yes			
88	Sales activity log (calls, meetings, e-mails, visits) with follow-up tasks and activity report	Yes			
89	Quotation covers and risk details driven by the product rules	Yes			
90	BIR Form 2307 for suppliers, supplier EWT in QAP, 1601-EQ and 1604-E	Yes			
91	Fixed asset disposal with gain or loss and output VAT	Yes			

10. Points to note in this release

These points come from the release test and the user manual. None of them stops the end-to-end cycle.

- The sign-in session is kept in the browser's local storage; a change to an httpOnly cookie is planned.
- Field encryption covers TIN, ID numbers and bank account numbers; other personal data relies on encryption of the database storage and backups.
- The integration adapters (SMS, Viber, CTPL authentication, LTO, insurer API, bank files, EIS, screening provider) are delivered in test mode; each goes live after the partner's contract and certification.
- A front-end library (react-router) carries a moderate security advisory; the upgrade is planned for the next minor release.
- Several masters have no Upload button yet; their templates are loaded by the System Administrator.
- The BIR reports give the figures in the BIR column order; the broker validates them with the BIR's tools before filing.
- No load test has been run yet; a load test on the production-sized environment is recommended before go-live.
