6. Release 1.0.....	14
6.1 What release 1.0 delivered.....	14
6.2 Defects and observations carried forward.....	14
6.3 Limits of release 1.0 resolved in 1.1.....	14
7. Known limitations and open items.....	15
7.1 Limits of the OOTB scope in release 1.1.....	15
7.2 Before go-live at a broker.....	15
8. Upgrade and versioning policy.....	16
8.1 Version numbers.....	16
8.2 Rules for every release.....	16
8.3 Entitlement and support of versions.....	16
9. Product roadmap.....	17
9.1 Partner certifications (what remains for live connectors).....	17
9.2 Near term (indicative: within 3 months).....	17
9.3 Mid term (indicative: 3 to 9 months).....	17
9.4 Later (indicative: beyond 9 months).....	18
10. Document Sign-Off.....	19

1. Document Control

Date	Version	Author & Business Unit Info	Reviewed By & Business Unit Info	Approved By & Business Unit Info	Change History
04 October 2026	1.1	iorta TechNXT			Release 1.1 entry (migrations 0243 to 0329): Philippine masters, enterprise menu and help, My Work, Product Configurator in the flow, audit trail, go-live workbench, release pipeline, AML/CFT, IC and NPC compliance, BIR, operations and accounting, distribution, integrations, branding and e-signatures; upgrade notes; roadmap of partner certifications

2. Acronyms

Acronym / Symbol	Definition / Meaning
OOTB	Out of the box
IC	Insurance Commission
BIR	Bureau of Internal Revenue
NPC	National Privacy Commission
DPA	Data Privacy Act of 2012 (RA 10173)
EOPT	Ease of Paying Taxes Act (RA 11976)
EIS	Electronic Invoicing System
CAS	Computerized accounting system
CTPL	Compulsory Third Party Liability

COC	Certificate of cover
LTO	Land Transportation Office
LOA	Letter of authority
PDC	Post-dated cheque
PSGC	Philippine Standard Geographic Code
AML	Anti-money laundering
CFT	Countering the financing of terrorism
AMLC	Anti-Money Laundering Council
CTR	Covered transaction report
STR	Suspicious transaction report
EDD	Enhanced due diligence
PEP	Politically exposed person
DST	Documentary stamp tax
LGT	Local government tax
FST	Fire service tax
VAT	Value-added tax
EWT	Expanded withholding tax
ATC	Alphanumeric tax code
DAT	Data file format of the BIR alphalists
KYC	Know your customer
OR	Official receipt
JV	Journal voucher
GL	General ledger
SoD	Segregation of duties
TOTP	Time-based one-time password
API	Application programming interface
BI	Business intelligence
AMC	Annual Maintenance Contract
CAB	Change advisory board
CR	Change request
Dev	Development environment

Pre-Prod	Pre-production environment
SIT	System integration test
UAT	User acceptance test

3. About this release

3.1 Release identification

Item	Value
Product	iNXT BrokerVerse OOTB, insurance broking platform for Philippine non-life brokers
Release	1.1
Build	Branch brokerverse-platform of 04 October 2026 (commit "E-signature consent IP in the personal data catalogue"), plus package B (Insurance Commission and data privacy compliance) and package G (sales activities, quote covers and risk fields, supplier BIR Form 2307, fixed asset disposal) once merged. The release tag v1.1.0 is [to confirm]
Previous release	1.0 (03 October 2026); its content is summarised in the chapter "Release 1.0"
Database migrations	0243 to 0329: 0243 to 0254 platform and go-live, 0260 to 0263 AML/CFT, 0270 to 0277 package B, 0280 to 0284 BIR, 0290 to 0298 operations and accounting, 0300 to 0308 distribution, 0310 to 0314 integrations, 0320 to 0322 package G (0323 to 0329 kept for the rest of package G)
Technology	React 18 web application, Node.js 22 API, PostgreSQL 16 database
Audience	Broker management, key users, System Administrator, compliance officer, auditors, and the iorta TechNXT delivery and support teams

3.2 Release in figures

Item	Release 1.0	Release 1.1
Delivered roles	7	8 (Compliance Officer added)
Back-end modules	45	70 (73 with packages B and G)
Registered API routes	868	1,291 (1,356 with packages B and G)
Menu screens	170	223
Database tables	167	250 (260 with packages B and G)

Item	Release 1.0	Release 1.1
Settings	404	659 (with packages B and G)
Scheduled jobs (Asia/Manila time)	18	32, 35 with package B; 14 delivered switched off
Document number series	61	85
Posting events with a delivered rule	31	43
Automated back-end tests	634	1,035 in 97 files, all passed on 04 October 2026
Front-end tests	43	162 in 31 suites, all passed

4. Release 1.1: what is new

4.1 Platform, navigation and Philippine masters

Capability	Where
Philippine geography out of the box from the PSGC of the 2nd quarter 2026: Region, Province (no longer "State"), City / Municipality with class and ZIP code, Barangay (full list as an optional load); Philippine address format on leads, clients, users, claims and endorsements, the region filled from the city or province (migration 0250, seed 12_ph_geography.sql)	Master > Location; every address form
Philippine practice masters: banks, government ID types with number formats, salutations, holidays, the IC list of insurers (seed 69_ph_practice_masters.sql)	Master > Organization; Master > Insurance Management
Enterprise side menu: Master in sections (Organization, Insurance Management, Location, Employee Management, User Management, Finance, System Configuration, Data Privacy, Go-Live and Data); skeleton rows while lists load	Side menu
Help panel: F1 or the help button opens the user manual section of the screen, with the support contacts (support.* settings, migration 0251)	Every screen
My Work: My Items, My Team by reporting line, My Tasks with reminders, Calendar; reassignment where the module allows it (migration 0253)	Operations > My Work
Product Configurator in the business flow: acceptance rules (refer, decline, loading) with authority, rating factors, document templates with merge fields, market mapping and the governing template applied to quotations (migration 0252)	Product Configurator; quotations
Audit trail as business events: who, when, from which screen, each changed field with old and new value; History panel on records; filters and Excel export (migration 0247)	Master > System Configuration > Audit Trail
Theme and Branding: themes, logo, favicon, sign-in picture, brand packs (the optional Toyota Insurance Services pack only with the client's written permission); branded documents, report files and e-mails; e-signatures captured with consent and mapped to document slots (migration 0254)	Master > System Configuration > System Settings > Theme and Branding; Master > Insurance Management > Signatories; My Profile

4.2 Go-live and release tooling

Capability	Where
Go-Live Data Workbench: configuration and migration kits, validation as a dry run, errors workbook, load (all or nothing), reconciliation (migrations 0244, 0246)	Master > Go-Live and Data > Go-Live Data Load
Environment comparison report: configuration and masters mirrored between environments, on screen and as backend/scripts/compare-environments.js (migration 0248)	Go-Live Data Load > Compare environments
Transaction reset after the smoke test (npm run	Command line

Capability	Where
reset:transactions), refused once the go-live lock goLive.locked is on (migration 0243)	
Client data masking for non-production copies (npm run mask:data) with --remark-copy and --register-production; environment marker system.environment (migration 0249)	Command line; docs/onboarding/DATA_MASKING.md
Release pipeline: one build promoted through Dev, SIT, UAT, a temporary Pre-Prod and Production with approvals, pre-deploy backup, smoke test, automatic and manual rollback (ci.yml, deploy.yml, rollback.yml)	deploy/RELEASE_PIPELINE.md

4.3 Compliance

Capability	Where
AML/CFT: onboarding of juridical clients before the first policy with signatories and beneficial owners, KYC documents, risk rating and EDD, screening lists (UN, AMLC, PEP, internal) and hits, covered and suspicious transaction alerts, cases, AMLC report files; Compliance Officer role (migrations 0260 to 0263)	Compliance
Package B, Insurance Commission: licence register with expiry reminders and payout block for unlicensed referrers, fit and proper records, insurer authority check at placement and issue, IC annual statement and production report (migrations 0270, 0271, 0274)	Compliance > Insurance Commission
Package B, complaints register under RA 11765 with acknowledgement and resolution deadlines and escalation (migration 0272)	Compliance > Insurance Commission > Complaints
Package B, breach register with the NPC 72-hour notification tracker (migration 0273)	Compliance > Data Privacy (NPC) > Breach Register
Package B, masking of personal data by role: TIN, ID, mobile, e-mail, bank account and birth date shown partially masked to users without view:pII, in screens and exports; optional "Show full identifiers" on request with audit (migration 0276)	Every screen and export
Package B, field encryption of TIN, government ID and bank account numbers at rest with key PII_ENCRYPTION_KEY and blind indexes for search (migration 0277)	Database

4.4 BIR and tax

Capability	Where
BIR returns with filing records: 0619-E, 1601-EQ, 1604-E with the alphalist DAT files, 2551Q percentage tax (migration 0280)	Accounts > Tax
Sales invoices under the EOPT Act for commission, fees and override commission, with payment acknowledgements (migration 0281)	Accounts > Tax > Sales Invoices
CAS registration pack: loose-leaf books of accounts with running page numbers (migration 0282)	Accounts > Tax
EIS connector: every invoice and cancellation queued for the BIR Electronic Invoicing System (migration 0283; job eis-outbox delivered off)	Accounts > Tax
Overriding, profit and contingent commission from	Commission > Insurer Overrides

Capability	Where
insurers: agreements with tiers, computation, approval, settlement (migration 0284)	
Package G: supplier BIR Form 2307 from payables and supplier EWT in the returns	Accounts > Tax

4.5 Operations and accounting

Capability	Where
Cover notes (binders) issued from an accepted quotation or placement, superseded by the policy (migration 0290)	Operations > Cover Notes
Computed cancellation: pro-rata, short-period scale when the insured cancels, flat; return premium with taxes and commission taken back (migration 0291)	Operations > Policy Cancellation
Post-dated cheque register: deposit due list, deposit into an official receipt, bounce, replacement (migration 0292)	Accounts > Post-Dated Cheques
Instalment invoices for instalment plans (migration 0293)	Accounts > Credit Control
Claim document checklist with reminders; claims settlements worked from the Accounting menu (migration 0294)	Operations > Claim Documents; Accounts > Claims Settlements
Motor claim repairs: estimates, letters of authority, vehicle release (migration 0295)	Operations > Motor Claim Repairs
Accounts payable: supplier invoices with input VAT and EWT, payments, AP ageing (migration 0296)	Accounts > Payables
Fixed assets and monthly depreciation (migration 0297); package G adds disposal by sale or write-off with gain or loss	Accounts > Fixed Assets

4.6 Distribution and marketing

Capability	Where
Lead assignment rules, queue and reassignment SLA (migration 0300)	Operations > Sales & Marketing > Lead Assignment
Distribution channels: dealer groups and branches, financing banks, affinity partners (migration 0301)	Master > Insurance Management > Distribution Channels
Brand-new vehicle dealer programmes with dealer sales uploads and bank letters (migration 0302)	Operations > Sales & Marketing > Dealer Programmes
Fleet schedules (migration 0303) and marine cargo open covers with certificates and declarations (migration 0304)	Operations > Fleet Schedules; Marine Open Covers
Facultative reinsurance placement as reinsurance broker (migration 0305)	Reinsurance > Facultative Placements
Client comparison and recommendation report (migration 0306)	Operations > Sales & Marketing > Comparison Reports
Marketing campaigns to consenting clients and prospects with opt-out (migration 0307)	Operations > Sales & Marketing > Campaigns
Report builder and scheduled BI extract (migration 0308)	Reports > Report Builder
Package G: sales activity log with follow-ups in My Work; quote wizard offering the covers and asking the risk fields of the Product Configurator template	Sales; quotations

4.7 Integrations

Capability	Where
Integration framework: connectors in test or live mode, outbox with retries, inbox with signature check, monitor (migration 0310)	Master > System Configuration > Integrations
SMS (Semaphore, Globe Labs, generic) and Viber business messages with templates per event (migration 0311)	Master > System Configuration > Message Templates
CTPL authentication with COC number series and optional LTO feed (migration 0312)	Operations > CTPL Authentication
Insurer API connectors: policy issuance request and claim status updates per insurer mapping (migration 0313)	Master > System Configuration > Insurer Integration
Bank payment files (bulk credit, InstaPay, PESONet layouts) and status files (migration 0314)	Accounts > Bank Payment Files; Master > Finance > Bank File Layouts

Every connector is delivered in test mode with a built-in fake provider. Live use needs the provider's credentials in the environment and the certification listed in the roadmap.

5. Upgrade notes for release 1.1

5.1 How the upgrade runs

The API applies migrations 0243 onwards and the seed by itself when it starts, under the migration lock, before it reports ready. Deploy through the release pipeline: the pre-deploy backup is taken first, one instance migrates, the smoke test runs. The previous release still runs on the newer schema, so an application rollback needs no database change. Run the environment comparison report against UAT before and after the production upgrade.

5.2 New environment variable: PII_ENCRYPTION_KEY

Package B adds PII_ENCRYPTION_KEY. Set it before deploying the release that contains migration 0277:

1. Generate a random value of at least 32 characters (`openssl rand -hex 32`), different from JWT_SECRET and DATA_ENCRYPTION_KEY and different in every environment.
2. Store it in the secret store of the environment and add it to the backend environment (`deploy/backend.env.example`). In production the API refuses to start without it.
3. Keep it with the database backups under the same controls as DATA_ENCRYPTION_KEY: without it the TIN, ID and bank account numbers in the database and in every later backup cannot be read.
4. Migration 0277 encrypts the identifiers already stored during the upgrade; allow for it in the maintenance window on a large database.
5. Rotation later: set the new key in PII_ENCRYPTION_KEY and the old one in PII_ENCRYPTION_KEY_PREVIOUS, restart, run `npm run pii:rotate` then `npm run pii:rotate -- --execute`, remove the previous key when nothing is left on it (`deploy/REFERENCE.md`).

Other variables: APP_ENVIRONMENT names the environment; integration connectors and the EIS read their credentials from environment variables named on the connector (`credential_env`, `eis.*_env`), never from the database.

5.3 Jobs delivered switched off

These jobs are installed but off. Switch each on in Master > System Configuration > Schedules only when its prerequisite is met.

Job	Switch on when
recurring-journals, accrual-reversal, period-auto-soft-close, month-end-reminder	Accounting has set up recurring journals, accruals and the close calendar
bank-auto-match	Bank statement formats and match rules are confirmed
remittance-schedules	Remittance schedules are agreed with each insurer
privacy-requests-due	The DPO has confirmed the response period for data subject requests
lead-assignment-sla	Lead assignment rules and SLA hours are set
sms-renewal-notices, sms-payment-reminders	The SMS connector is live and the templates are approved

Job	Switch on when
eis-outbox	The broker's EIS accreditation is granted and the EIS credentials are in the environment
campaign-dispatch	The first campaign is approved and marketing consents are recorded
aml-provider-retry	A commercial screening provider is contracted
bi-extract	The BI datasets and the extract folder are agreed

The new jobs delivered on are my-work-reminders, integration-outbox, cover-note-expiry, pdc-deposit-due, claim-document-reminders, aml-transaction-monitoring, aml-kyc-refresh-due and, with package B, compliance-reminders, complaints-deadlines and privacy-breach-deadlines.

5.4 Settings to review

Group	Review
aml.*	Covered transaction threshold and payment modes, risk score bands, beneficial owner threshold, KYC refresh months, block of issue pending EDD, AMLC institution code (compliance officer)
bir.*, invoice.*, cas.*, eis.*	Registered trade name, TIN branch code, withholding agent category, percentage tax rate and ATC, ATP and CAS permit numbers, invoice serial range, EIS mode and endpoint (finance and tax adviser)
compliance.*, complaints.*, privacy.* (package B)	Licence types and reminder days, referrer licence check, insurer authority check (warn or block), IC statement mapping and minimum net worth, complaint deadlines, breach notification hours, masking and reveal mode
cover_note.*, endorsements.cancellation_*, pdc.*, payables.*, fixed_assets.*, motor_claims.*, claims.document_*	Cover note validity and wording, short-period rules, PDC deposit account, input VAT code and maker-checker, depreciation start, LOA wording and participation
leads.assignment_*, channels.*, motor_programmes.*, fleet.*, marine.*, campaigns.*, comparison.*, report_builder.*, bi.*, sales_activities.*	Assignment fallback and SLA, mortgagee clause, bank letter text, fleet pro-rata basis, marine conveyances and wording, opt-out text, comparison disclaimer, report row limits
integrations.*, messaging.*, ctpl.*, bank_payments.*, insurer_integration.*	Inbound enabled, stuck minutes, SMS and Viber connectors and consent, CTPL authentication on issue, InstaPay limit, premium tolerance
branding.*, signatures.*, support.*, system.environment, golive.*	Theme and logos, draft watermark, support e-mail and hours, environment marker, cutover date and go-live lock

Review the number series of the new documents in Master > Document Numbering (cover notes, sales invoices, supplier invoices, complaints and others) and the posting rules of the new events in Master > Finance > Posting Rules (ap.invoice, ap.payment, fa.depreciation, fa.disposal, sales_invoice.issue, sales_invoice.payment, override_commission.accrual, override_commission.settlement, ri.facultative.*).

5.5 Before the release is tagged

- Merge package B and package G and run the full test suites again.

- Change the number series prefix of the complaints register: migration 0272 of package B seeds the prefix CMP, which the comparison report series of migration 0306 already uses; the migration stops on a database that has both.
- Add housekeeping rules for the new operational tables (integration outbox and attempts, EIS outbox, go-live workbook rows).
- Add the 25 translation keys reported missing by `npm run check:i18n` (audit timeline, claim audit trail, currency master, policy history).

6. Release 1.0

6.1 What release 1.0 delivered

Release 1.0 (03 October 2026, tag v1.0.0) delivered the core broking cycle: prospects, quick quote and comparison of packaged products, requests for quotation to several insurers, quotations with premium taxes and commission, placement slips with co-insurance, policy issue with KYC, endorsements and cancellations, claims to settlement, renewals with notices and win-back, open items and payment capture, billing and official receipts, collections and credit control, disbursements and petty cash, remittance with approvals, commission and incentives, the general ledger from posting rules with journal vouchers and period end, bank and insurer reconciliation, reinsurance treaties and cessions, the Product Configurator, masters, user management with the authority matrix, SoD and access reviews, data privacy (consents, data subject requests, export and anonymisation), payment links and the report catalogue. Philippine rules built in: DST, VAT, LGT and FST premium taxes, CTPL tariff, KYC, commission VAT and EWT, BIR Form 2307 and the BIR working papers, Asia/Manila time and PHP.

6.2 Defects and observations carried forward

ID	Item	Status in 1.1
BV-DEF-001	react-router moderate security advisory (open redirect)	Open; navigation targets come from the application's own routes; upgrade on the roadmap
BV-DEF-003	Application-level encryption covered only two-step verification secrets	Closed with package B: TIN, ID and bank account numbers encrypted at rest
BV-DEF-002, 004, 006; BV-OBS-005, 007, 008	Data privacy module, template column, charges calculator, renewal beyond grace, menu group address, incentive card	Closed in 1.0

6.3 Limits of release 1.0 resolved in 1.1

Topic	Release 1.0	Release 1.1
Insurer systems	No insurer API	Insurer API connectors (test mode until certified)
IC report formats	No IC-format report	IC annual statement and production report (package B)
Percentage tax	No working paper for a non-VAT broker	2551Q return
Anti-money laundering	Outside OOTB	AML/CFT module
Bank payments	No bank payment file	Bank payment files and status files
Claim settlement cash	On the claim screens only	Accounts > Claims Settlements
Personal identifiers	Not encrypted, not masked	Encrypted and masked by role (package B)

7. Known limitations and open items

7.1 Limits of the OOTB scope in release 1.1

Topic	Release 1.1 behaviour	Route
Partner connectors	Delivered in test mode; live use after certification with each partner	Roadmap and change request per partner
Report schedules	Scheduled e-mail of reports exists in the API; no setup screen	System Administrator through the API
Two-step enrolment	Shows the key and a link, not a QR code	Users type the key into the authenticator app
Session tokens	Kept in browser local storage	Move to httpOnly cookie on the roadmap
Housekeeping	No retention rule yet for the integration outbox and attempts, the EIS outbox and go-live workbook rows	Next minor release
Mobile	Web application for desktop and laptop browsers	See roadmap
Language	English screens; Thai partly translated; no Filipino translation file	Change request
Load test and penetration test	Not run on a production-sized environment	Before go-live at each broker

7.2 Before go-live at a broker

- Set `security.require_2fa_roles` to at least System Administrator, Accounting and Accounting Manager; decide who holds `view:pii`.
- Replace the default authority limits with the board-approved signing authority; appoint the Compliance Officer.
- Fill the BIR, invoice and CAS settings; confirm premium tax rules, LGU rates, ATC and GL accounts with the broker's tax adviser.
- Load configuration and open business through the Go-Live Data Workbench; run the transaction reset after the smoke test, then switch on the go-live lock.
- Register production for the masking tool (`npm run mask:data -- --register-production`) and set `PII_ENCRYPTION_KEY` with its escrow copy.
- Keep every integration connector in test mode until its certification is signed; switch off the Sandbox payment gateway in production.
- Switch on "Send e-mails" only after the SMTP mailbox is tested.

8. Upgrade and versioning policy

8.1 Version numbers

Releases are numbered MAJOR.MINOR.PATCH and tagged in the repository (for example v1.1.0); GET /api/version shows the commit that is running.

Type	Example	Content	Frequency (standard)
Patch	1.1.1	Defect fixes and security fixes; no change to how users work	As needed; emergency release for P1 or security
Minor	1.2.0	New functions, new reports, regulatory form updates, upgrades of components; existing data and settings kept	Planned releases, monthly when there are fixes or changes
Major	2.0.0	Changes that need a migration project, retraining or a change of hosting components	Announced at least 6 months ahead [to confirm]

8.2 Rules for every release

- Database changes only add to the schema; they are applied automatically when the API starts, under a lock, and recorded. The previous release runs on the newer schema, so a release can be rolled back by redeploying the previous build.
- Settings and master data changed by the broker are kept: the seed inserts only what is missing.
- Every release has release notes: fixes, changes, migrations, new environment variables, jobs delivered off, settings to review and anything the System Administrator must do by hand.
- Each release follows the release pipeline: Dev, then SIT for a large broker, then UAT on a release candidate tag, a temporary Pre-Prod for a major release, then Production on the release tag after the CAB approval; the broker runs the UAT scripts for the changed areas; iorta TechNXT runs the regression.
- A verified backup is taken before every deployment to Pre-Prod and Production; deployment happens in the agreed maintenance window, announced at least 5 business days ahead.

8.3 Entitlement and support of versions

- Updates of the OOTB version and regulatory form updates released for all customers are included while the subscription or the AMC is in force.
- Support covers the current release and the two planned releases before it (assumption in the Production Support Approach). A broker that stays further behind is asked to upgrade before a defect is fixed.
- Broker-specific changes made under a change request are carried forward into later releases only where the change request says so [to confirm the standard clause].

9. Product roadmap

Indicative and not contractual. The roadmap shows iorta TechNXT's current intentions. Content, order and timing may change. It is not a commitment to deliver any function, it is not part of any licence, subscription or support agreement, and a purchase decision should be based on the functions in the release delivered. Items a broker needs by a date are agreed as change requests.

9.1 Partner certifications (what remains for live connectors)

The connectors are built and tested against the fake provider. Each needs the partner's sandbox, credentials, test cases signed by the partner and, where the partner requires it, a formal certification before it is switched to live for a broker.

Partner connector	What remains	Owner
BIR EIS	Broker's EIS accreditation, BIR test environment run, production credentials	Broker with iorta TechNXT
CTPL authentication provider and LTO feed	Provider onboarding per insurer, COC series issued by the insurer, test authentications	Broker, insurer, iorta TechNXT
Insurer APIs	Mapping per insurer (products, codes, answers), the insurer's sandbox and sign-off, one insurer at a time	Insurer with iorta TechNXT
Bank payment files	Bank's file layout confirmation and test file acceptance per bank and service (bulk credit, InstaPay, PESONet)	Broker's bank
SMS and Viber	Sender name registration, gateway account, template approval	Broker
Payment gateways (PayMongo, Dragonpay)	Merchant account, live keys, test in the provider's sandbox	Broker
Commercial AML screening provider	Contract and API credentials, list coverage confirmation	Broker's compliance officer

9.2 Near term (indicative: within 3 months)

Item	Why
Merge of packages B and G and the rest of package G (supplier 2307, fixed asset disposal, sales activities, quote covers and risk fields)	Complete release 1.1
Housekeeping rules for the integration, EIS and workbench tables	Control database growth
Upgrade react-router (BV-DEF-001)	Close the moderate advisory
QR code for two-step enrolment; setup screen for scheduled report e-mails	Easier use
Image scanning in the pipeline	Secure development lifecycle

9.3 Mid term (indicative: 3 to 9 months)

Item	Why
Session refresh in an httpOnly cookie	Remove tokens from browser local storage
Move of the front-end build from Create React App to Vite	Maintained build tooling; clears build-time advisories
Rate limits shared across API instances	Consistent limits with several instances
Load test results and sizing confirmation on a	Evidence for larger brokers

Item	Why
production-sized environment	

9.4 Later (indicative: beyond 9 months)

Item	Why
Mobile-friendly screens for sales and claims	Field use
Filipino screen translation	Users who prefer Filipino
Further partner connectors as brokers request them	Fewer files and e-mails with partners

Brokers can propose roadmap items through their account manager. iorta TechNXT reviews the roadmap with customers at least once a year [to confirm the forum, for example a customer advisory meeting].

10. Document Sign-Off

Serial Number	Description	Owner	Status
1	Release tag of the 1.1 build to be confirmed; packages B and G to be merged before the tag; partner certifications per broker; roadmap dates indicative	iorta TechNXT	Open
