1. Document Control

Date	Version	Author & Business Unit Info	Reviewed By & Business Unit Info	Approved By & Business Unit Info	Change History
03 October 2026	1.0	iorta TechNXT Corp.	To be completed	To be completed	Initial issue

2. Acronyms

Acronym / Symbol	Definition / Meaning
AE	Account executive
AMC	Annual Maintenance Contract
BIR	Bureau of Internal Revenue
CR	Change request
CTPL	Compulsory Third Party Liability
DPA	Data Privacy Act of 2012
DPO	Data protection officer
EWT	Expanded withholding tax
IC	Insurance Commission
LOB	Line of business
OOTB	Out of the box
OR	Official receipt
PHP	Philippine peso
SAWT	Summary Alphalist of Withholding Taxes
QAP	Quarterly Alphalist of Payees
SLSP	Summary List of Sales and Purchases
SoD	Segregation of duties
TCO	Total cost of ownership
UAT	User acceptance test

3. Purpose and handling

This battlecard helps the iorta TechNXT sales team win against the alternatives a Philippine non-life broker already uses or is considering instead of iNXT BrokerVerse OOTB. It is organised by **category of alternative**, not by competitor: what the broker gets from it, where it hurts, what to ask, what to show and what to avoid saying.

INTERNAL. Do not send, forward or show this document to a prospect, a client or a partner. Prospect-facing answers are in the FAQ and Objection Handling document and the Demo Script.

Rules for using it:

- **No claims about named competitors.** Do not describe a named product's features, prices, clients or weaknesses. If a prospect names a product, ask what they like about it and compare against the category, using facts about iNXT BrokerVerse only.
- If a named competitor must be discussed internally, keep to its own published positioning and mark the statement **[to verify]** until checked against the competitor's current public material. None is named in this version.
- Every proof point must be something the prospect can see: a screen in the demo, a document in the package, or a figure from the Rate Card or the pricing workbook.
- Say plainly what the OOTB version does not do (FAQ, chapter on known limits). Losing a deal on a disclosed limit costs less than losing a reference after go-live.

4. Where we win and where we do not

4.1 Our position in one paragraph

iNXT BrokerVerse OOTB keeps the broker's policy, money and books in one record, built for Philippine non-life broking: premium taxes by LGU, CTPL tariff, KYC on motor, co-insurance, remittance to insurers by share, direct bill, commission with withholding, bank and insurer reconciliation, month-end close and the BIR working papers (Form 2307, VAT Summary, SAWT, QAP, SLSP). It is delivered as a configured product, not a project, with a published price list, an 8-week plan for a small broker and hosting in Singapore or the Philippines.

4.2 Strong fit

- Brokers with 10 to 300 users who run placement, collections, remittance and accounting themselves.
- Brokers with several insurers, co-insurance or direct bill business, where the remittance and reconciliation work is heavy.
- Brokers preparing for an IC examination, a BIR audit or a Data Privacy Act review who need records, controls and an audit trail.
- Brokers whose key staff hold the process in spreadsheets and who worry about a person leaving.

4.3 Weak fit (qualify out or set expectations early)

- A broker that wants every screen to match its current process exactly: OOTB means configuration, and changes are priced change requests.
- A broker whose main need is a direct API to each insurer: there is none in the OOTB version.
- Life, pre-need or HMO business: the product is built for non-life broking.
- A buyer who needs a native mobile application or Filipino screens now.
- A broker that only needs a contact list and quote tracking: a CRM or spreadsheet may be enough for them.

5. Alternative 1: spreadsheets and an accounting package

5.1 What the broker has

Excel workbooks for the policy register, renewals, collections and remittance; an off-the-shelf accounting package for the books; e-mail and paper for approvals. Often run well by long-serving staff.

5.2 Why they stay

- No licence cost visible; the team knows the files.
- The accounting package is trusted by the external auditor.
- Fear of a long project and of disruption at month-end.

5.3 Where it hurts (to uncover, not to assert)

- Premium collected but not yet remitted, per insurer, is worked out by hand.
- Commission, EWT and Form 2307 are prepared outside the books and reconciled late.
- Renewals depend on one person's calendar.
- No audit trail of who changed a premium or a rate; no maker-checker.
- Personal data in files on laptops and e-mail, with no record of consent or of data subject requests.

5.4 Discovery questions

- "When a client pays, how many places is the payment typed before it reaches the insurer's remittance?"
- "How do you know today which premium is collected but not yet remitted, per insurer?"
- "Who prepares Form 2307 and the QAP, and how long does it take each quarter?"
- "If the person who keeps the renewal file is on leave, who sends the notices?"
- "If a client asked for all personal data you hold on them, how would you find it?"

5.5 Proof points

Point	Show	Demo Script reference
One record from quotation to remittance	Follow one policy from the Placement Slip to the official receipt and the remittance	0:15 Placement; 0:33 Money in; 0:39 Money out
The books follow the business	Bank reconciliation, month-end close approval, posting rules readable and approved by a second user	0:45 Close and tax
BIR working papers from the same ledger	BIR Form 2307, VAT Summary, SAWT, QAP	0:45 Close and tax

Point	Show	Demo Script reference
Renewals do not depend on one person	Renewal Queue with notices at 60, 30 and 15 days	0:29 Renewals
Controls	Authority Matrix, Segregation of Duties, Audit Trail	0:51 Controls and data privacy

5.6 Landmines to set

- "Ask any system you look at to show the remittance to one insurer built from what was actually collected, split by co-insurance share."
- "Ask to see Form 2307 and the SAWT come out of the same ledger as the commission."
- "Ask who approves a change to a commission rate, and where that approval is recorded."

5.7 Watch out

- Do not criticise the finance team's accounting package. If they keep it, BrokerVerse can be the broking ledger and send the trial balance or journal register to it as Excel or CSV.
- Do not promise a direct interface to their package; it is a change request.

6. Alternative 2: insurer portals

6.1 What the broker has

Each insurer's own portal or agent system to quote and issue motor, CTPL and simple personal lines, plus the insurer's statements of account. The broker keeps its own records in spreadsheets around these portals.

6.2 Why they stay

- Issuance is fast for simple lines and the insurer bears the system cost.
- The CTPL certificate and authentication are completed in the insurer's or the government's system anyway.

6.3 Where it hurts

- One login per insurer; no comparison across insurers for the client.
- The broker's view of its own book is spread across portals; the client belongs to the portal, not the broker.
- Collections, remittance, commission, co-insurance and the broker's books are not covered by any one insurer's portal.
- Commercial lines (fire, IAR, marine, casualty, engineering) need slips to several insurers that portals do not handle.

6.4 Discovery questions

- "How many insurer portals do your staff sign into each day?"
- "Where do you see one client's policies across all insurers?"
- "How do you compare insurers' offers for a client today?"
- "How do you reconcile each insurer's statement of account against what you collected and remitted?"

6.5 Proof points

Point	Show	Demo Script reference
The broker owns the client view	Operations > Clients: one client with its policies, claims, renewals and endorsements across insurers	0:23 Servicing and claims
Compare insurers for the client	Broker Slip with market responses from several insurers; Compare offers	0:15 Placement
Commercial lines with co-insurance	Placement Slip with lead and co-insurers, shares to 100%	0:15 Placement
Insurer statements matched	Accounts > Insurer Reconciliation with an imported statement	Not in the standard script: add on request after 0:39 Money out

6.6 Landmines to set

- "Ask whether the system gives you one view of a client across every insurer."
- "Ask how a co-insured fire risk is placed, billed and remitted by share."

6.7 Watch out

- Do not position BrokerVerse as a replacement for an insurer's CTPL authentication. The insurer's or government system remains; BrokerVerse records the certificate number and authentication code.
- There is no insurer API in the OOTB version. Exchange is by file and e-mail; an insurer API is a priced change request.

7. Alternative 3: regional or global broking systems

7.1 What the broker sees

Broker management systems sold across several countries, often with a large feature list, a regional reference base and a partner-led implementation. A broker with a foreign parent may be asked to use the group system.

7.2 Why they are chosen

- A group mandate or a familiar brand.
- Broad functions, including some the broker may not use.
- Perceived lower risk of a vendor with many countries.

7.3 Where we compete

Compare against Philippine work the broker does every day, not against feature counts. Ask the prospect to verify each point with the other vendor, not to take our word for it.

Question for the prospect to put to any vendor	What iNXT BrokerVerse shows
Are DST, VAT, LGT by city or municipality and FST computed on the quotation and the bill?	Premium Taxes & LGU Rates applied on every quotation, policy, endorsement and renewal
Is the CTPL tariff per vehicle class held in the system and protected from discount?	Motor template with 1-year and 3-year CTPL, read-only and never discounted
Are Form 2307, VAT Summary, SAWT, QAP and SLSP produced from the ledger in BIR column order?	Accounts > Tax
Are Philippine bank statement formats delivered for reconciliation?	BDO, BPI, Metrobank and generic formats
Is the implementation priced and planned before signature?	Rate Card; 8, 12 or 16 to 20 weeks by size
Can the data stay in the Philippines?	Local partner or broker-hosted options
Is consent and data subject request handling in the product?	Master > Data Privacy

7.4 Discovery questions

- "Which functions of that system would your team use every day?"
- "Who would configure the Philippine taxes and BIR forms, and is that in the quoted price?"
- "Where would your data be hosted, and who signs the data processing agreement?"
- "What is the total cost over five years, including implementation, localisation and support?"

7.5 Proof points

Point	Show	Reference
Philippine premium taxes	Order Summary of a quotation with	Demo Script 0:09 Prospect

Point	Show	Reference
on a quotation	VAT 12%, DST of PHP 0.50 per PHP 4.00 or fraction, LGT 0.75% and CTPL	and quotation
BIR outputs	Form 2307, VAT Summary, SAWT, QAP	Demo Script 0:45 Close and tax
Price certainty	Package totals over 5 years	Rate Card; Price Book workbook
Regulatory mapping	Philippine Regulatory Compliance Matrix	Package document

7.6 Landmines to set

- "Ask for the five-year cost with the Philippine localisation and BIR outputs included and priced."
- "Ask to see the LGT of a client in a named city computed on the quotation."
- "Ask where support is provided from and in which time zone."

7.7 Watch out

- Do not quote other vendors' prices or published estimates in front of a prospect unless the source is verified and current **[to verify]**. The FAQ's comparison with global system pricing is for internal context only until verified.
- With a group mandate, sell to the local finance and operations pain (remittance, BIR, reconciliation) and offer BrokerVerse as the local system feeding the group with exports.

8. Alternative 4: a custom build

8.1 What the broker considers

An in-house development team, a local software house, or a low-code platform, building a system "exactly to our process".

8.2 Why they choose it

- Exact fit to current processes; ownership of the code.
- A trusted developer relationship.
- A belief that the broker's process is too unusual for a product.

8.3 Where it hurts

- Time: a broking and accounting system takes a long time to build and test; the broker pays during the build.
- Scope: policy, remittance, commission, co-insurance, reconciliation, close, BIR forms, privacy, security controls are each a project.
- Keeping up: BIR, IC and NPC changes must be built and paid for by the broker each time.
- Key person risk moves from the spreadsheet owner to the developer.

8.4 Discovery questions

- "What is the build estimate, and does it include accounting, BIR forms, reconciliation and the security controls?"
- "Who maintains it when a BIR form changes, and who pays?"
- "How will it be tested before go-live? How many test cases?"
- "What happens if the developer leaves?"

8.5 Proof points

Point	Show	Reference
Already built and tested	497 test cases, 634 automated business-rule tests, 371-step end-to-end cycle	Test Summary Report
Configure, not code	Master > Configuration by business area; Product Configurator; Document Numbering	Demo Script 0:51 Controls and data privacy; Implementation Approach
Security controls already in place	Two-step verification, lockout, maker-checker, audit trail, OWASP mapping	Architecture, Infrastructure, Security and Privacy; Security Due Diligence Questionnaire
Continuity	Mainstream technology (React, Node.js, PostgreSQL); optional source code escrow with the perpetual licence; broker can host	FAQ; Escrow Agreement

8.6 Landmines to set

- "Ask the builder for the test evidence they will hand over at go-live."
- "Ask how the month-end close and sub-ledger tie-out will be built and proven."
- "Ask who will update the system when the BIR changes a form."

8.7 Watch out

- Do not dismiss the developer relationship. Offer the change request route for genuine gaps, priced at the published day rates, and the API for the developer to build around the product.

9. Alternative 5: do nothing now

Signal	Response	Proof
"Next year"	Offer the workshop now: a sized plan and a price valid 90 days	Rate Card validity
An audit or IC examination is coming	Show the audit trail, registers and controls	Demo Script 0:51 Controls and data privacy
A key person is leaving or retiring	Show renewals, remittance and close running without one person's files	Demo Script 0:29 Renewals; 0:45 Close and tax
A system contract is ending	Plan back from the end date; small broker 8 weeks	Implementation Approach

10. Objections specific to competition

Objection	Answer with a fact	Proof
"The other system has more features."	"Which of them would your team use every day? Let us look at those against your own example."	Demo with the prospect's example
"The other vendor is bigger."	"Size matters less than who supports you in Manila time and how quickly. Here are our support targets and the agreement that fixes them."	Production Support Approach; SLA
"The other quote is cheaper."	"Let us compare five-year totals with implementation, localisation, hosting and support included."	Rate Card five-year totals
"Our developer can build this."	"Here is what is already built and tested; your developer can extend around it through the API."	Test Summary Report; API catalogue
"Our insurer gives us a free portal."	"Keep it for issuance; BrokerVerse gives you the client view across insurers and does the money and the books."	Demo Script 0:23 Servicing and claims; 0:39 Money out

11. Disclose early: known limits that competitors may raise

Limit	Honest position
No insurer API	Files and e-mail; insurer API as a change request
No IC-format report	Figures from financial statements and production reports
No native mobile app	Web application for desktop and laptop browsers
No anti-money laundering screening	KYC data on motor; no sanctions or PEP screening
No external penetration test yet	Recommended before go-live; committed yearly once hosted
No ISO/IEC 27001 or SOC 2 certificate of iorta TechNXT	Cloud providers hold theirs; iorta TechNXT plan [to confirm]
Client references	[to confirm which clients iorta TechNXT may name]

12. Win and loss log

After every decision, the account executive records in the sales pipeline record: the alternative chosen, the reason given, the reason believed, the price gap if any, and the limit that mattered. The sales head reviews the log each quarter and updates this battlecard. Win and loss figures: [to confirm once the first decisions are logged].

13. Document Sign-Off

Serial Number	Description	Owner	Status
1	Win and loss evidence, client references and any named competitor positioning to be verified before use	iorta TechNXT	Open

Sign Off Date	Signature	Approved By	Department & Project Role
