

INSURANCE BROKING PLATFORM FOR THE PHILIPPINES

iNXT BrokerVerse

Placement, policy servicing, broker accounting, BIR returns and AML/CFT compliance in one system, built for Philippine non-life insurance brokers.

From the first quotation to the month-end close: every slip, policy, receipt, remittance and journal in one place, with maker-checker on the money and an audit trail on every change.

Executive Dashboard: premium, policies, new business, claims, retention and receivables against target.

1,291
APIs

8
connectors

32
scheduled jobs

8
personas

497
test cases

APIs, connectors, jobs and personas of the current build. Release test of 03 and 04 October 2026: 480 of the 497 test cases passed, a 23-step policy life cycle passed end to end, every role checked on its menu screens.

Where a broker's time goes today

A Philippine non-life broker earns its commission on placement and service, yet much of the day goes to re-keying the same risk, premium and share into e-mails, spreadsheets and ledgers. These are the five gaps we hear most, and what BrokerVerse does about each of them.

TODAY

Manual placement

Broker slips go out by e-mail, offers come back as PDFs, and the chosen shares are typed again into the quotation, the policy and the bill.

Spreadsheets for remittance

Premium collected for each insurer is worked out by hand, net of commission and per co-insurer share, month after month.

BIR compliance effort

VAT, withholding tax and alphalists are rebuilt from the books at each deadline, and Forms 2307 are tracked in folders.

Slow renewals

Expiring policies are found late, notices depend on someone remembering, and lapses are noticed after the fact.

Audit gaps

Approvals happen by e-mail or signature, changes leave no trace, and the books stay open after the month is reported.

WITH BROKERVERSE

Request for Quotation sends one slip to every insurer approached, records each offer or decline, ranks the offers and carries the chosen lead and co-insurer shares into the Placement Slip and the policy.

Automated Processing builds the remittance per insurer from collected premium, net of commission and by share, with approval levels by amount, a settlement voucher and Remittance Ageing on each insurer's terms.

Taxes are split when the policy is billed. VAT Summary, SAWT, QAP and SLSP come out of the ledger in the BIR column order, and BIR Form 2307 is issued and received with its own number series.

Every policy enters the renewal pipeline 90 days before expiry, notices go out at 60, 30 and 15 days, at-risk policies are scored, and lapses after the 30-day grace period are tracked for win-back.

Maker-checker on quotations, vouchers, remittances, settlements and closes, with notifications to the approvers; an audit trail with before and after values; 52 number series; periods that soft-close, close and lock.

One record, many teams. A risk entered once by Sales & Marketing is the same record the Processing Team places, Operations services, Claims settles and Accounting bills, receipts, remits and closes. Each step leaves a numbered document and a journal from its posting rule.

One system, end to end

BrokerVerse covers the whole broking cycle and the accounting of a broker. The flow below is the path every piece of business takes; the modules that follow are all part of the OOTB edition.

Prospect	Request for Quotation	Quotation	Placement Slip	Policy	Bill and official receipt	Remittance	Commission	Close and BIR
----------	-----------------------	-----------	----------------	--------	---------------------------	------------	------------	---------------

Endorsements, claims and renewals run on the issued policy. Collections, reconciliation and period end run on the money that follows.

01 Sales and quotation

Prospects with assignment rules, dealer programmes for brand-new vehicles, Quick Quote and Compare Insurers, and a five-step motor quotation with CTPL. The server re-prices every quotation and applies the acceptance rules. The client approves online through a signed link.

02 Placement with insurers

Request for Quotation (broker slip) to several insurers, offers and declines recorded, Compare offers with the best offer and market capacity. Placement Slip firm order with each insurer's confirmation; shares total 100% with one lead.

03 Policy issuance and servicing

Issue from a bound Placement Slip, from an accepted quotation, or with Record Issued Policy. The client, the bill and the commission are created at issue. Motor issue requires government ID, chassis, motor and plate or MV file number.

04 Endorsements

Personal details, motor details and coverage changes, extensions and cancellations (full, partial, pro-rata). Coverage changes are priced again; additional premium is billed and return premium is credited and netted on the insurer's next remittance.

05 Claims

Claim registration with the Preliminary Loss Advice to the insurer, document checklist with reminders, motor repairs and letters of authority, settlement by maker and approval by a second Claims user, co-insurer shares, claims paid through the broker.

06 Renewals

Renewal pipeline 90 days ahead, notices at 60, 30 and 15 days, renewal batches of up to 500 policies, Renewal Queue, At-Risk Policies, Negotiations, Lapse Management with win-back campaigns, Retention Analytics.

07 Billing and official receipts

Premium and instalment invoices, official receipts posted only by Accounting after verifying the payment, EOPT sales invoices for commission and fees, post-dated cheques. PDFs e-mailed to the client. Payment links through PayMongo or Dragonpay.

08 Collections and credit control

Collections with ageing (current, 1-30, 31-60, 61-90, over 90 days) and daily reminders. Instalment Plans, Premium Warranty Monitor, Client Credit Limits and Remittance Ageing under Credit Control.

THE PLATFORM, CONTINUED

09 Remittance and direct bill

Remittance per insurer and per co-insurer share, approval levels by amount (PHP 100,000 and PHP 1,000,000), settlement and insurer payment voucher. Direct bill: commission debit notes with 12% VAT, collection net of 10% EWT.

10 Commission

Commission Rate Matrix by insurer, product, line and policy type. Paid to licensed referrers when the premium is fully collected, by voucher or bank file less withholding tax. Overriding commission and incentive programmes.

11 General ledger and period end

Posting rules turn each business event into a balanced journal. Journal, Correction and Reversal JV with approval, Recurring Journals, Month-End Close with checklist, Year-End Close and Financial Statements.

12 Bank and insurer reconciliation

Bank statements imported in BDO, BPI, Metrobank or generic layout, six matching rules, adjustments, stale cheques, reconciliation approved by the Accounting Manager. Insurer statements imported with a differences report.

13 BIR tax

BIR Form 2307, 0619-E, 1601-EQ, 1604-E and 2551Q reconciled to the ledger, VAT Summary, SAWT, QAP, SLSP and their DAT files, EOPT sales invoices, the EIS connector and the CAS books pack.

14 Reinsurance

Treaties (quota share, surplus, excess of loss, stop loss) with approval, cession tracking and bordereaux, claims recovery, reinsurer statement reconciliation and treaty analytics.

15 AML/CFT and IC compliance

Client onboarding, risk rating and EDD, list screening, covered and suspicious transaction alerts, cases and AMLC report files. Licence register, insurer authority check, complaints register and IC working papers.

16 Reports and dashboards

Catalogue reports in Excel, CSV or PDF on your letterhead, a Report Builder for ad hoc questions, a BI extract, live dashboards, and My Work: each person's items, team, tasks and calendar.

17 Security and control

Eight roles checked by the server on every request, two-step verification, Authority Matrix, Segregation of Duties, Access Reviews, masking of personal identifiers by role and an Audit Trail with before and after values.

18 Data privacy

Consent per purpose, Data Subject Requests with due dates, export and anonymisation, encryption of TIN, ID and bank numbers, a breach register on the NPC 72-hour clock, and masking of test copies.

NEW IN THIS RELEASE

Integrations

SMS and Viber, CTPL authentication, insurer APIs and bank payment files through one monitored outbox. Delivered in test mode; each partner certifies its side.

Your brand everywhere

Theme, logo and sign-in page; branded documents, reports and e-mails; e-signatures mapped to the documents they sign.

Compliance built in

AML/CFT toolkit, IC registers and BIR returns with DAT files. Your compliance officer and tax adviser confirm the settings.

EIGHT PERSONAS

Built around the people who do the work

Each user signs in with a personal ID and sees only the menus of the role. The server applies the same permissions on every request, and the person who enters a transaction cannot approve it.

Sales & Marketing Account executives	Prospects, quick quotes and motor quotations sent for online approval; own pipeline, premium and commission on the Sales Dashboard; renewal follow-up.
Processing Team Placement and policy processing	Request for Quotation to the market, offer comparison, Placement Slips, policy issue, endorsements, renewal approvals, motor tariff and products, reinsurance.
Operations Client servicing	Clients and their policies in one view, client onboarding, endorsement requests, cover notes, payment capture for verification, and My Work for everything due.
Claims Claims officers	Claims Dashboard, registration with the insurer notice, adjuster follow-up, settlement with a second approver, claim letters, reinsurance recoveries.
Accounting Finance team	Receipts, collections, remittance, direct bill, commission payouts, vouchers, journals, bank reconciliation, month-end preparation, BIR reports and Form 2307.
Accounting Manager Finance approver	Approves month-end and year-end close and bank reconciliations, reopens periods, posts into soft-closed periods, reviews the close status.
System Administrator IT and set-up	Users and roles, theme and branding, integrations, number series, posting rules, configuration, go-live data load, schedules and the audit trail.
Compliance Officer AML/CFT	Client due diligence and EDD approval, screening hits and lists, transaction alerts, AML cases and the AMLC report files.

PHILIPPINE RULES BUILT IN

Configured for the Philippine market from day one

CTPL and motor ■ CTPL 1-year and 3-year tariff per vehicle class in the motor template ■ CTPL inclusive of taxes and never discounted ■ Auto Passenger PA priced per seat ■ CTPL authentication and COC series through the provider connector	Taxes on premium ■ DST 12.5%, LGT 0.75%, VAT 12%, FST 2% on fire and IAR ■ Taxes per line of business and LGU rates per city ■ Premium taxes booked to their own accounts, due to insurers ■ Return premium reverses the taxes	BIR outputs ■ BIR Form 2307, 0619-E, 1601-EQ, 1604-E and 2551Q ■ SAWT, QAP, SLSP and their BIR DAT files ■ EOPT sales invoices and the EIS connector ■ CAS books pack: loose-leaf books, system description
IC and AMLA ■ Licence register; commission held for unlicensed agents ■ Insurer certificate of authority checked at placement ■ Complaints register (RA 11765), IC working papers ■ AML/CFT: risk rating, screening, CTR and STR files	Data Privacy Act ■ Consent per purpose with notice version and channel ■ Data subject requests with due dates, export, anonymisation ■ Identifiers masked by role and encrypted at rest ■ Breach register on the NPC 72-hour clock	Local formats ■ Regions, provinces, cities and barangays (PSGC) ■ TIN, ZIP codes, Philippine mobile numbers, holidays ■ PhilSys ID, UMID, passport and other KYC IDs ■ Bank statement and payment file layouts

DEPLOYMENT

Hosted where your data should live

The same build runs in the cloud or in a Philippine data centre: a web application, a stateless API, PostgreSQL 16 and a file store. Each option is sized to the broker and confirmed by a performance test in UAT.

AWS Singapore region	Microsoft Azure Southeast Asia region	Local partner Philippine data centre	On-premise Broker's own servers
- Reference deployment - CloudFront, load balancer, containers - RDS PostgreSQL Multi-AZ, encrypted - Automated backups with point-in-time restore	- No code change needed - Front Door with WAF - Container Apps, PostgreSQL Flexible Server - Zone-redundant high availability	- Data held in the Philippines - Managed virtual machines - PostgreSQL with streaming standby - Off-site copy in a second site	- Docker or Node.js with PM2 - nginx reverse proxy and TLS - Backups with WAL archiving - Broker IT runs the platform

The Data Privacy Act does not require data to stay in the Philippines but keeps the broker accountable for data held abroad. Brokers who want the system of record in the country choose a local partner or on-premise hosting.

PostgreSQL 16 database of record	Node.js 22 stateless API	React 18 browser application, no install	Asia/Manila business time zone
--	------------------------------------	--	--

IMPLEMENTATION

Live in 8, 12 or 16 to 20 weeks

Configure, do not customise. BrokerVerse is fitted to the broker through master data and settings: insurers and credit terms, products and the motor tariff, commission, tax codes, chart of accounts, posting rules, number series and approvals. Hypercare lasts until the first month-end close is done.

8 weeks Small broker One office, up to 25 users, up to 10 insurers, up to 5,000 in-force policies. Go-live at the start of week 7; hypercare weeks 7 and 8.	12 weeks Medium broker Up to 3 offices, 26 to 100 users, up to 25 insurers, up to 25,000 in-force policies. Go-live at the start of week 10; hypercare weeks 10 to 12.	16-20 weeks Large broker More than 3 offices and 100 users, many insurers, more than 25,000 in-force policies. Go-live at the start of week 15 (20-week plan); hypercare to week 20.
---	--	--

Mobilise	Discover	Set-up	Configure	Migrate data	Train	SIT	UAT	Cutover	Go-live	Hypercare
----------	----------	--------	-----------	--------------	-------	-----	-----	---------	---------	-----------

What OOTB means

The broker uses the delivered screens, workflows, reports, documents and connectors. Each connector (SMS, CTPL provider, insurer, bank, BIR EIS) goes live when its partner accepts the interface. Customisation and new kinds of integration (core banking, eFPS) are change requests, estimated and priced before any work starts.

Support that knows the product

After hypercare, iorta TechNXT supports BrokerVerse through one service desk. The broker's key users and System Administrator handle the first line; iorta TechNXT handles analysis, fixes and releases.

L1	Broker key users and System Administrator	How-to questions, users and passwords, settings and master data, logging the ticket with the evidence.
L2	iorta TechNXT application support	Triage, reproduction, analysis with request IDs and the audit trail, configuration and data corrections under change control, workarounds.
L3	iorta TechNXT engineering	Code defects, performance, infrastructure, security incidents, root-cause analysis, fixes and releases.

Service levels (standard proposal)

Severity	First response	Restore or workaround
P1 Critical	30 minutes	4 service hours
P2 High	2 service hours	2 business days
P3 Medium	1 business day	5 business days
P4 Low	2 business days	Planned

Standard support 8:00 to 18:00 Philippine time, Monday to Friday; 24 x 7 cover for P1 available as an option. Final targets are fixed in the support agreement.

How changes are handled

- Monthly planned releases, tested first in the test environment
- Database snapshot before every release; rollback by image tag
- Configuration changes recorded in the audit trail with old and new values
- Posting rule changes proposed by one user and approved by another
- Problem records and root-cause analysis for every P1
- Monthly service review with ticket and target figures

WHY IORTA TECHNXT

A finished product, documented and tested

Built for Philippine broking

CTPL, premium taxes, BIR returns and EOPT invoices, AML/CFT, IC registers and the Data Privacy Act are part of the product, not a project.

Tested before you see it

497 test cases, a 634-test business rule regression on PostgreSQL and a full UAT cycle of 371 business steps from set-up to month-end close.

Documented for your team

A user manual opened on each screen with F1, role decks, requirements, process flows, test plans, reports book and support runbooks.

Configuration over code

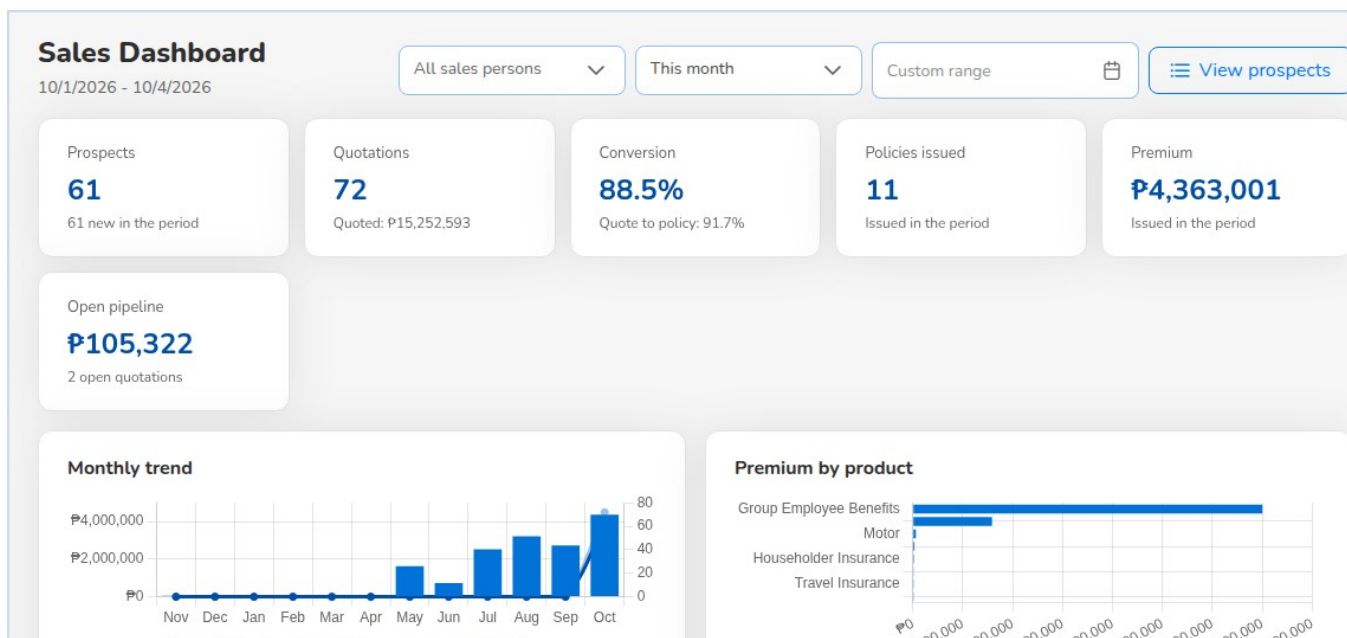

Settings, masters, posting rules and the Product Configurator change the system. Upgrades stay simple because the code is the same for every broker.

Accounting that closes

Every event posts through a posting rule; maker-checker, period locks, bank reconciliation and month-end checklist give the auditors their trail.

Open and portable

React, Node.js and PostgreSQL with permissively licensed components; 1,291 APIs documented in OpenAPI; runs on AWS, Azure or your own servers.

Sales Dashboard: prospects, quotations, conversion, policies issued and premium for the sales team.
