1. Document Control

Date	Version	Author & Business Unit Info	Reviewed By & Business Unit Info	Approved By & Business Unit Info	Change History
03 October 2026	1.0	iorta TechNXT			Initial issue

2. Acronyms

Acronym / Symbol	Definition / Meaning
OOTB	Out of the box
CR	Change request
PM	Project manager
UAT	User acceptance test
SIT	System integration test
LGU	Local government unit
ATC	Alphanumeric tax code
GL	General ledger
BIR	Bureau of Internal Revenue
ATP	Authority to Print
SoD	Segregation of duties
DPO	Data Protection Officer

3. Introduction

3.1 Purpose

This guide explains how iorta TechNXT and the broker use the **BrokerVerse_Discovery_and_Configuration_Workbook.xlsx** at mobilisation and in the discovery workshops. The workbook is the configuration workbook named in the Implementation Approach and Plan: it holds every decision that turns the delivered system into the broker's system, and it is signed off at the end of discovery.

Discovery in an OOTB implementation is limited to configuration. Each workshop shows the delivered screens with the broker's own examples and records decisions. It does not collect requirements for new development. A need that configuration cannot meet is recorded as a gap and goes to the change request process.

3.2 What is in the workbook

Sheet	Content	Items
Instructions	How to fill the workbook, columns and status values	
Summary	Count of items per sheet and status, percent configured	
Company and Branches	Legal identity, branding, branches, people, calendar, dashboards, hosting	22
Users and Roles	Users, role mapping, two-step verification, password policy, SoD, access reviews	18
Insurers	Insurer master, credit and remittance terms, billing mode, statements, co-insurance	15
Products and LOB	Lines, products, covers, placement journey, motor tariff, KYC, renewals, claims	22
Commission Rates	Rate matrix, referrers, sharing, withholding, payout rules, incentives	9
Chart of Accounts	Chart, account determination, posting rules, close, opening balances, collections	35
Banks and Gateways	Bank accounts, statement formats, payment modes, payment gateways, transfers	12
Numbering Series	Every document series with its prefix, pattern and reset rule	62
Approvals and Limits	Authority matrix, maker-checker switches, remittance approval, credit limits	23
E-mail and Templates	Sender, client and insurer e-mails, claim letters, receipt footer, privacy notice	18
Taxes and LGU	Premium taxes, LGU rates, tax codes and ATC, VAT status, BIR documents	15
Data Migration Sources	Source, count and owner of each object to load, scope, mock load dates	22
Integrations	SMTP, bank files, payment gateway, insurer files, ledger export, network	12
Reports	Schedules, retention, report gaps and every catalogue report	43

Each row gives the question, the screen where the answer is configured (menu names as on screen), the value delivered out of the box, the broker's answer, the owner, the phase it is needed by, a due date, a status and the setting key or template.

4. Before the workshops

4.1 At mobilisation (week 1)

1. The iorta TechNXT PM sends the workbook with the data request list at kick-off.
2. The broker's PM names an owner for each role in the Owner column (for example the Accounting Manager by name) and sets due dates from the plan of the implementation size.
3. Owners answer the items marked **Mobilisation** in the first week: legal identity, go-live date, hosting option, user counts, volumes and the data migration sources. These fix the size and the plan.
4. iorta TechNXT loads the broker's legal name, logo and a few of its own products and insurers into the test environment, so the workshops show the broker's names on screen.

4.2 Preparing each workshop

- Send the relevant sheets two working days ahead and ask owners to fill what they already know.
- Ask for samples: an insurer statement, a bank statement per account, the current policy register, a commission statement, last month's trial balance, current official receipt and invoice formats with the ATP.
- Prepare a scenario from the broker's own business for each workshop (for example a co-insured fire risk, a motor renewal, a direct-bill insurer).

5. Workshop plan

The workshops follow the Implementation Approach and Plan. Durations are recommended for a medium broker; a small broker can combine workshops, a large broker may need a second session for ledger and tax.

#	Workshop	Participants (broker)	Sheets	Duration (recommended)
1	Organisation and access	Sponsor, System Administrator, IT head	Company and Branches; Users and Roles	Half day
2	Sales and placement	Sales & Marketing, Processing Team	Products and LOB; Insurers (placement and co-insurance); E-mail and Templates (client texts)	Half day
3	Policy servicing and renewals	Operations, Processing Team	Products and LOB (renewals, KYC, endorsements)	Half day
4	Claims	Claims	Products and LOB (claims rows); Insurers (loss advice); E-mail and Templates (claim letters)	Two hours
5	Billing, collection and remittance	Accounting, Accounting Manager	Insurers (terms, billing mode); Banks and Gateways; Approvals and Limits	Half day
6	Commission and incentives	Accounting, Sales & Marketing	Commission Rates	Two hours
7	Ledger and close	Accounting Manager	Chart of Accounts; Numbering Series	Half day
8	Tax	Accounting Manager, tax adviser	Taxes and LGU; Numbering Series (BIR documents)	Two hours
9	Data, integrations and reports	IT head, data owners, report users	Data Migration Sources; Integrations; Reports	Half day

Recommended: Hold workshop 1 first, because roles and approvers are needed in every later workshop, and workshop 8 after workshop 7, because tax codes point to GL accounts.

6. Running a workshop

6.1 Agenda

1. Purpose, scope and the rule "configure, do not customise" (5 minutes).
2. Walk through the delivered process on screen with the broker's scenario, role by role.
3. Go through the workbook rows of the workshop in order. For each row: show the screen, read the OOTB default, agree the answer.
4. Record open questions with an owner and a due date.
5. Read back the decisions and the gaps at the end.

6.2 Recording decisions

- Write the decision in **Client answer** in the broker's words and figures (PHP amounts, days, account codes). Where the default is kept, write "Keep default" and set the status to **Confirmed**.
- Set **Status**: Open, Answered, Confirmed, Configured, Not applicable or Gap (CR).
- Use **Notes** for the reason behind a decision, especially where it differs from the default (for example a stricter approval limit set by the board).
- Add a row at the end of a sheet, with the next ID, for an item the workbook does not have. Do not change existing IDs: they are referred to in the fit-gap register and in UAT.
- Do not paste personal data into the workbook. Staff lists and client extracts go into the upload templates.

6.3 Classifying differences

Every difference between the broker's way of working and the delivered system is classed in the fit-gap register.

Class	Meaning	Action
Fit	Delivered as it is	Confirm
Configure	Met by a setting or master data	Answer in the workbook
Procedure	The broker changes how it works	Record the new procedure for training
Gap	Needs a change to the product	Status Gap (CR); raise a change request; not in the go-live scope unless the steering committee approves it

Before classing an item as a gap, check the setting key in the Notes column and Master > Configuration for the area concerned. Many apparent gaps are settings.

6.4 Questions that need care

Area	Why	Who decides
Authority matrix limits	The delivered limits are examples; the board-approved signing authority replaces them	Sponsor with the board resolution
Tax rates, ATC and GL accounts	Errors flow into BIR working papers	Accounting Manager with the tax adviser
Invoices and official receipts	Which documents are registered and how numbers continue from the old system	Accounting Manager with the tax adviser
Two-step verification roles	Delivered empty; recommended for administrators and accounting	IT head
Hosting location	Cross-border transfer under the Data Privacy Act if outside the Philippines	Sponsor with the DPO
SoD rules	Small teams may not be able to separate every pair of roles	Sponsor; document compensating controls

7. After the workshops

7.1 Sign-off

1. The iorta TechNXT PM checks the Summary sheet: every item is Confirmed, Not applicable or Gap (CR); no item is Open.
2. The broker's owners review their sheets; the sponsor signs off the workbook and the fit-gap register together.
3. The signed workbook is version-controlled; any later change goes through the change process of the project and is recorded in Notes with the date.

7.2 From workbook to configuration

- iorta TechNXT configures the test environment from the workbook in the order of GO_LIVE_DATA_SETUP.md, by upload where a template exists and on the screen otherwise, and sets each row to **Configured** after checking it on screen.
- The key user of each team checks the configured values in the test environment before SIT.
- After UAT acceptance the same values are applied to production. The workbook is the checklist for that step.
- The workbook is handed to production support at hypercare exit as the record of the broker's configuration.

7.3 Common pitfalls

Pitfall	Prevention
Late answers on insurers, commission and the chart of accounts	Ask for them at mobilisation; they drive mock load 1
Decisions made by people who do not own them	Owner column filled by name at kick-off
Requirements written instead of decisions	Keep to the row's question; record a gap only after checking the settings
Defaults kept by silence	A default is kept only when the owner confirms it
Placeholder values left in production (sender address, loss advice recipient, sandbox gateway)	Rows marked "replace" are checked at cutover

8. Document Sign-Off

Serial Number	Description	Owner	Status
1	No open items at the time of issue	iorta TechNXT	

Sign Off Date	Signature	Approved By	Department & Project Role
