1. Document Control

Date	Version	Author & Business Unit Info	Reviewed By & Business Unit Info	Approved By & Business Unit Info	Change History
03 October 2026	1.0	iorta TechNXT			Initial issue

2. Acronyms

Acronym / Symbol	Definition / Meaning
OOTB	Out of the box
GL	General ledger
TB	Trial balance
CoA	Chart of accounts
OR	Official receipt
ATP	Authority to Print
BIR	Bureau of Internal Revenue
Pre-Prod	Pre-production environment
SIT	System integration test
UAT	User acceptance test
API	Application programming interface
XLSX	Excel workbook
CSV	Comma-separated values
PM	Project manager

3. Introduction

3.1 Purpose

This plan describes how a broker's data moves from the old system into BrokerVerse OOTB and how the switch to BrokerVerse is made: which data objects are loaded, with which upload templates, in what order, how each load is validated and reconciled, how the mock loads rehearse it, the cutover checklist, the go/no-go criteria and the rollback.

It applies the step-by-step set-up of docs/onboarding/GO_LIVE_DATA_SETUP.md to the project and adds the controls around it.

3.2 Principles

- **Templates only.** Every load uses the delivered upload templates in docs/package/05_Delivery/Upload_Templates. Each workbook has a Data sheet (exact headers, sample rows to delete), a Columns sheet (required, format, allowed values, accepted alternative headers) and an Instructions sheet (screen, API route, file types, row limit, what happens to a wrong row).
- **The broker owns the data.** The broker extracts, cleanses and signs off its data. iorta TechNXT advises on mapping, runs the loads with the broker and reports the results.
- **Open positions, not history.** BrokerVerse receives what is open at the go-live date: in-force policies, unpaid premium, the trial balance. Closed history stays in the old system, which is kept read-only.
- **One go-live date.** The go-live date is the first day of transactions in BrokerVerse. Balances and open items are taken from the old system at the close of the day before.
- **Reconcile everything.** Every load is checked on counts and totals against control figures produced from the old system before the load.
- **Rehearse.** The full sequence runs at least twice before cutover (mock loads in UAT, or SIT and UAT for a large broker), and the last run is the cutover rehearsal in a temporary Pre-Prod created from a production backup.

3.3 Roles

Role	Party	Responsibility
Data owner per object	Broker process owner	Extract, cleanse, approve the file, sign off the reconciliation
Accounting Manager	Broker	Chart of accounts mapping, trial balance, open receivables, amounts due to insurers; signs off the financial reconciliation

Role	Party	Responsibility
Broker PM	Broker	Data readiness tracking, cutover coordination
System Administrator	Broker	Masters and users in production; loads that have no Upload button with iorta TechNXT
Migration lead	iorta TechNXT	Mapping, load runs, load logs, reconciliation reports, cutover runbook
DevOps lead	iorta TechNXT	Environments, snapshots, the provisioning script, rollback

4. Data objects

4.1 In scope

Group	Data object	Source in the old system	Loaded into
Organisation	Company, branches, departments	Company records	Master > Generals > Organization
Organisation	Employee hierarchy and designations; staff branch, designation and reporting line	HR list	Master > Generals > Employee Management; Master > Generals > User Management > User
Access	Users with one role each	User list	Master > Generals > User Management > User, or the provisioning script
Reference	Countries, states (provinces), cities	Address tables (delivered data covers the Philippines; load only what is missing)	Master > Generals > Location
Reference	Currencies, exchange rates	Finance	Master > Finance > Currency, Exchange Rate
Insurance	Insurers with commission rate, premium payment warranty, remittance terms, billing mode	Insurer master and agreements	Master > Generals > Insurance Management > Insurance Company
Insurance	Lines of business, products, policy types, covers	Product list (delivered data covers Philippine non-life; load only what is missing)	Master > Generals > Insurance Management
Insurance	Vehicle brands, models, variants, vehicles	Motor tables (delivered data holds vehicle makes)	Master > Generals > Insurance Management > Vehicle
Insurance	Signatories	Authorised signatories	Master > Generals > Insurance Management > Signatories
Commission	Commission rates per insurer, product and line of business	Commission tables	Master > Finance > Commission Rate Matrix
Finance	Chart of accounts	GL account list	Master > Finance > Main Account, Sub Account
Finance	Transaction codes, write-off reasons; petty cash funds	Finance set-up	Master > Finance; Accounts > Petty Cash > Initiate
Finance	Banks and the broker's bank accounts	Bank list	Master > Finance > Bank
Open business	In-force policies and their clients	Policy register at go-live	Operations > Policy > Bulk Upload, go-live mode
Open business	Open premium receivables	Receivable ageing at the day before go-live	Accounts > Collections > Import open items
Open business	GL opening balances	Trial balance at the day before go-live	Accounts > Period End > Period Management > Import opening balances
Open business (optional)	Leads and quotations in progress	Pipeline	Operations > Sales & Marketing > Prospects and Quotations, Bulk Upload

4.2 Open payables and other open positions

Position	How it moves to BrokerVerse
Premium due to insurers on bills of the old system	Part of the Due to Insurers opening balance. Paid with payment vouchers in Accounts > Disbursement (Disbursements_Upload_Template.xlsx for many at once), not through the remittance run, which only sees bills booked in BrokerVerse
Commission due to referrers and agents earned before go-live	Part of the opening balance of the commission payable account; paid with payment vouchers (payee type Agent/Referrer)
Commission receivable from insurers on direct-bill business billed in the old system	Part of the opening balance of Commission Receivable - Insurers. There is no open-item import for debit notes; recommended procedure: clear the balance with a journal voucher when the insurer pays, agreed with the Accounting Manager in discovery
Unreconciled bank items	Kept on the old bank reconciliation; BrokerVerse reconciles from the reconcile-from date of each bank account (normally the go-live date)
Open claims	No claim upload. Claims open at go-live on policies loaded as in-force are registered on Operations > Claims after go-live; claims on policies that are no longer in force stay in the old system until closed
Co-insured in-force policies	The go-live upload loads each policy with its insurer at 100%. Co-insured policies are entered on the screen with their participants

4.3 Out of scope

Expired, cancelled and lapsed policies; settled and closed claims; paid bills; transaction history and journals before go-live; prior fiscal years; documents and images of the old system; quotations and leads the broker decides not to carry over. Migrating any of these is a change request.

5. Upload templates

5.1 Templates in

docs/package/05_Delivery/Upload_Templates

All templates were verified against the importers: each was loaded unchanged through the API on a fresh database (docs/package/05_Delivery/Upload_Templates/README.md). Required columns are listed in bold on the template's Columns sheet. An import file holds at most 20,000 data rows and 10 MB (IMPORT_MAX_ROWS, IMPORT_MAX_MB); the receipt upload takes at most 1,000 rows.

Template	Loads	Screen
Company_Upload_Template.xlsx	Companies (letterhead, TIN, IC licence)	Master > Generals > Organization > Company (API route)
Branch_Upload_Template.xlsx	Branches	Master > Generals > Organization > Branch (API route)
Department_Upload_Template.xlsx	Departments	Master > Generals > Organization > Branch, departments of the branch (API route)
Users_Provisioning_Template.xlsx / .csv	Users with role and initial password	Server script backend/scripts/provision-users.js
Hierarchy_Upload_Template.xlsx	Ranks of the employee hierarchy	Employee Management > Hierarchy (API route)
Designation_Upload_Template.xlsx	Designations	Employee Management > Designation (API route)
Country_Upload_Template.xlsx	Countries	Master > Generals > Location > Country
State_Upload_Template.xlsx	States or provinces	Location > State
City_Upload_Template.xlsx	Cities with postal code	Location > City Master
Currency_Upload_Template.xlsx	Currencies	Master > Finance > Currency
Exchange_Rate_Upload_Template.xlsx	Exchange rates with effective dates	Master > Finance > Exchange Rate (API route)
Insurance_Company_Upload_Template.xlsx	Insurers, default commission rate, premium payment warranty days, remittance terms, billing mode	Insurance Management > Insurance Company
Line_of_Business_Upload_Template.xlsx	Lines of business	Insurance Management > Line of Business (API route)
Product_Upload_Template.xlsx	Products per line	Insurance Management > Product (API route)
Policy_Type_Upload_Template.xlsx	Policy types per product	Insurance Management > Product (API route)
Cover_Upload_Template.xlsx	Covers	Insurance Management > Cover (API route)
Vehicle_Brand_Upload_Template.xlsx	Vehicle brands	Insurance Management > Vehicle
Vehicle_Model_Upload_Template.xlsx	Vehicle models per brand	Insurance Management > Vehicle
Vehicle_Variant_Upload_Template.xlsx	Variants with body type and seating	Insurance Management > Vehicle
Vehicle_Upload_Template.xlsx	Vehicles	Insurance Management > Vehicle
Signatories_Upload_Template.xlsx	Signatories	Insurance Management > Signatories (API route)

Template	Loads	Screen
Chart_of_Accounts_Upload_Template.xlsx	Main and sub accounts with statement group and normal balance	Master > Finance > Main Account > Upload
Transaction_Code_Upload_Template.xlsx	Transaction codes with GL accounts and user limits	Master > Finance > Transaction Code
Write_off_Reason_Upload_Template.xlsx	Write-off reasons with GL account and maximum	Master > Finance > Account Determination (API route)
Bank_Upload_Template.xlsx	Banks	Master > Finance > Bank
Bank_Account_Upload_Template.xlsx	The broker's bank accounts with GL cash account, statement format and reconcile-from date	Master > Finance > Bank (Bank accounts)
Policies_Upload_Template.xlsx	In-force policies and their clients (go-live mode), or new policies	Operations > Policy > Bulk Upload
Open_Items_Upload_Template.xlsx	Unpaid premium bills at go-live	Accounts > Collections > Import open items
Opening_Balances_Upload_Template.xlsx	Trial balance at the day before go-live	Accounts > Period End > Period Management > Import opening balances
Leads_Upload_Template.xlsx	Prospects	Operations > Sales & Marketing > Prospects > Bulk Upload
Quotations_Upload_Template.xlsx	Quotations in progress	Operations > Sales & Marketing > Quotations > Bulk Upload
Receipts_Upload_Template.xlsx	Official receipts against open bills (day-to-day use)	Accounts > Receipts > Bulk upload
Disbursements_Upload_Template.xlsx	Payment vouchers, for example to pay amounts due to insurers at go-live	Accounts > Disbursement > Bulk upload
Bank_Statement_Generic_Upload_Template.xlsx	Bank statements of banks without a delivered format	Accounts > Bank Reconciliation > Reconciliation Workspace > Import statement
Remittance_Bank_Transactions_Template.xlsx / .csv	Bank transactions for remittance reconciliation	Accounts > Remittance > Reconciliation > Import
Remittance_Bulk_Upload_Template.xlsx	Policies for bulk remittance processing	Accounts > Remittance > Bulk Processing

"API route" means the screen has no Upload button in this release; a System Administrator loads the file through the route written on the template's Instructions sheet, or enters the records on the screen.

5.2 Data that has no template

Tax codes (Master > Finance > Taxation: delivered with the Philippine codes and edited on the screen), the Commission Rate Matrix, account determination, posting rules, document numbering, product templates and the motor tariff, settings and schedules. These are configured on the screens and are part of the configuration, not of the data migration.

5.3 Format rules

- Dates as YYYY-MM-DD; amounts as plain numbers without currency sign or thousands separator; rates as fractions where the Columns sheet says so (0.20 for 20%).

- One row per record; no merged cells, formulas or hidden rows; delete the sample rows.
- Codes that link files (insurer names, product types, policy numbers, account codes) must match exactly what is already loaded.

6. Load sequence

The order follows the dependencies between objects. A step starts only when the previous one is reconciled.

#	Load	Depends on	Who
1	Company and letterhead; System Settings	Nothing	System Administrator
2	Location masters (only what is missing)	1	System Administrator
3	Branches, departments	1, 2	System Administrator
4	Users and roles; security settings	3	System Administrator
5	Employee hierarchy and designations (if used)	3	System Administrator
6	Currencies and exchange rates (if foreign currency business)	1	Accounting
7	Chart of accounts review and load; account determination	1	Accounting Manager with iorta TechNXT
8	Banks, bank accounts, signatories; transaction codes, write-off reasons, petty cash	7	Accounting
9	Insurers	2	Processing Team, Accounting
10	Lines of business, products, policy types, covers, vehicles (only what is missing); product templates and motor tariff	9	Processing Team
11	Commission rules; Commission Rate Matrix; referrers	9, 10	Accounting
12	Tax codes, premium taxes and LGU rates (review)	7	Accounting Manager
13	Document numbering: next numbers of each series	Last numbers of the old system	System Administrator, Accounting
14	In-force policies and clients (go-live mode)	9, 10	Processing Team
15	Open premium receivables	14	Accounting
16	GL opening balances	7, 15	Accounting Manager
17	Leads and quotations in progress (optional)	9, 10	Sales & Marketing
18	Payment vouchers for amounts due to insurers at go-live, when paid	16	Accounting, after go-live

Points to know (from GO_LIVE_DATA_SETUP.md, step 11):

- In go-live mode each policy row creates the client and the policy with its insurer at 100%, with no bill, journal or commission. Each row creates a new client, so a client with several policies appears once per policy and is merged afterwards on the Clients screen if needed.
- Open items are loaded against policies already in BrokerVerse; a direct-billed policy is refused. Each open item becomes a bill that ages, is chased by the collection reminders and is paid with a normal official receipt. No journal is posted. Rows already loaded for the same go-live date are skipped, so a corrected file can be loaded again.
- While an open item is unpaid, a claim on that policy is refused when `claims.block_unpaid_premium` is on (the delivered setting).

- Opening balances go into the fiscal year that contains the go-live date. Debits must equal credits or nothing is loaded. Loading again with the same go-live date replaces the earlier load; another date is refused. A go-live date after journals already posted in the same fiscal year is refused: load the balances before anyone posts.
- Close the accounting periods of the fiscal year before the go-live date in Period Management so nothing is posted into them.

7. Validation and reconciliation

7.1 Validation by the system

Each upload checks every row and reports the failing rows with the reason; the rest are loaded (opening balances are all or nothing). The load log keeps, for each file: file name, date and time, user, rows read, created, skipped, failed, and the list of failures.

7.2 Control figures

Before each load the data owner produces control figures from the old system, signed by the Accounting Manager for financial objects. After the load the same figures are produced from BrokerVerse and compared.

Object	Control figures from the old system	Where to read them in BrokerVerse	Tolerance
Masters (insurers, products, accounts, banks, users)	Count of records per type	Each master list; Upload result "created, failed"	Exact
In-force policies	Count; count per insurer and per line; total sum insured; total gross premium; total net premium	Operations > Policy; Reports > Operational Reports > Production; Production Register	Exact
Clients	Count of distinct insureds	Operations > Clients (before and after merging duplicates)	Explained differences only
Open premium receivables	Count of open bills; total open balance; totals per ageing bucket (30, 60, 90, 120 days)	Accounts > Collections; Reports > Financial Reports > SOA/Premium Receivable	Exact
GL opening balances	Total debits, total credits, balance per account	Accounts > Period End > Financial Statements: trial balance as at the go-live date; Trial Balance report	Exact
Premiums Receivable	GL balance = total of open items	Trial balance against Collections total	Exact
Due to Insurers	GL balance per insurer = insurer statements less items in dispute	Trial balance; Aged Payables to Insurers; Due to Insurers by Co-insurer	Exact, or reconciled list of differences
Bank accounts	GL cash balance = bank balance less outstanding items of the old reconciliation	Trial balance; bank statements	Exact
Leads and quotations	Count	Prospects and Quotations lists	Exact

7.3 Checks of meaning

Counts and totals agree even when data is wrong in the detail, so the key users also check samples:

- 20 policies per line of business opened on the screen: insured, insurer, dates, sum insured, premium, plate number for motor.
- 20 open items: policy, bill reference, due date, balance, ageing bucket.
- One receipt posted in UAT on a migrated open item (UAT script F1) and a claim registered on a migrated policy without open premium (UAT script C1).
- Trial balance reviewed line by line by the Accounting Manager (UAT script F7); the ageing compared bucket by bucket (UAT script F6).
- Document numbers: one test document of each series shows the next number set from the old system, including the official receipt series registered with the BIR.

7.4 Reconciliation report

Each load produces a reconciliation report: control figures, figures from BrokerVerse, differences with the explanation and the action, and the sign-off of the data owner and, for financial objects, the Accounting Manager.

8. Mock loads

Mock load	Purpose	Data	Exit criteria
Mock 1	Prove mapping and templates; find data quality issues	Full extract from the old system at a recent date	All files load; failures listed and assigned for cleansing
Mock 2	Prove cleansing; measure load times; reconcile	Fresh extract after cleansing	Failures below 1% of rows and explained; all control figures reconcile
Mock 3 (large)	Full rehearsal on fresh data	Fresh extract at a month-end	All control figures reconcile; UAT on migrated data passes
Cutover rehearsal (small: third load; medium: mock 3; large: mock 4)	Cutover rehearsal with the cutover timetable, in Pre-Prod	Fresh extract	Done inside the cutover window; reconciliation signed

Each mock load runs in UAT (small and medium broker) or in SIT and UAT (large broker) on a database reset to reference data plus the agreed configuration. The cutover rehearsal runs in a temporary Pre-Prod restored from a backup of the configured Production environment (Environment Strategy and Production Rollout Plan). The time of each step is recorded and used for the cutover timetable. Small brokers run two mock loads and then the rehearsal.

9. Cutover

9.1 Cutover timetable (example for a go-live on a Monday)

When	Activity	Owner
Go-live minus 10 business days	Go/no-go checkpoint 1: UAT signed, mock rehearsal reconciled, training done, configuration copied to production	Steering committee
Go-live minus 5 business days	Communication to users, insurers and banks; production smoke test; users created in production and first sign-in tested	Broker PM, System Administrator
Go-live minus 3 business days	Masters loaded and reconciled in production (steps 1 to 13); document numbering checked	System Administrator, migration lead
Friday, end of day	Old system frozen for new transactions; last receipts and vouchers of the day posted there	Broker PM
Friday evening	Day-end in the old system; extracts: in-force policies, open receivables, trial balance, amounts due to insurers; control figures produced and signed	Data owners, Accounting Manager
Saturday	Database snapshot of production; load in-force policies, open items, opening balances; reconciliation	Migration lead, Accounting
Sunday morning	Key user checks of samples; reconciliation reports signed	Key users, Accounting Manager
Sunday afternoon	Go/no-go checkpoint 2 (final)	Steering committee
Sunday evening	Old system set to read-only; scheduled jobs and e-mail sending on in BrokerVerse	DevOps lead, System Administrator
Monday	Go-live; floor support; first receipts, payments and bank imports watched	All

9.2 Cutover checklist

#	Item	Done
1	Production deployed and smoke-tested (deploy/README.md section 4); sample data off; backups running and a restore tested	
2	Security settings reviewed; administrator password changed; two-step verification on for the required roles	
3	Company, letterhead and System Settings set; a PDF checked	
4	Users created with the right roles; each user signed in once	
5	Configuration promoted from the accepted UAT environment and compared item by item with the configuration workbook	
6	Tax codes, premium taxes and LGU rates confirmed by the broker's tax adviser	
7	Document numbering set to the last number used plus one; official receipt series matches the BIR registration	
8	E-mail sending on; password reset e-mail received	
9	Payment gateway credentials in the secret store; live test payment done (if used)	
10	Bank accounts with GL cash account, statement format and reconcile-from date set to the go-live date	
11	Schedules reviewed; jobs Accounting wants switched on	
12	Fiscal year and periods set; periods before the go-live date closed	

#	Item	Done
13	Old system frozen; final extracts and control figures signed	
14	Snapshot of production before the loads	
15	In-force policies loaded and reconciled	
16	Open items loaded and reconciled with the ageing	
17	Opening balances loaded; trial balance agrees; Premiums Receivable equals open items; Due to Insurers reconciled	
18	Key user sample checks passed	
19	Rollback plan confirmed; old system kept available read-only	
20	Go decision recorded in the minutes	

9.3 Go/no-go criteria

Go-live goes ahead only when all of these are met:

- UAT signed off by each process owner; no open severity 1 or 2 defect.
- Final load reconciled: policy, open item and trial balance control figures agree exactly, or each difference is explained and accepted in writing by the Accounting Manager.
- All users trained in their role and able to sign in; System Administrator and key users ready for first-line support.
- Production checks of the cutover checklist done.
- Hypercare team and support contacts in place for the first week.
- Rollback plan confirmed and the old system available.

The steering committee decides. A no-go names the reason, the actions and the new date.

10. Rollback

10.1 When

Rollback is considered when, before or during the first business days, a severity 1 issue makes BrokerVerse unusable for a core process (official receipts, policy issue, remittance) and no workaround is possible within the agreed time, or the final reconciliation cannot be agreed. The steering committee decides. The last point at which rollback is planned is the end of the first business week; after that the issue is handled by fix forward, because transactions entered in BrokerVerse would have to be re-entered in the old system.

10.2 How

Situation	Action
Before go-live (failed final load or reconciliation)	Restore the production snapshot taken before the loads, fix the data, reload; or declare a no-go and keep working in the old system, which was only frozen
After go-live, within the rollback window	Unfreeze the old system; re-enter there the transactions made in BrokerVerse since go-live (receipts, vouchers, policies), using BrokerVerse reports (Receipts Register, Production Register, Journal) as the list; restore the BrokerVerse snapshot for the next attempt
Application release problem	Redeploy the previous back-end image and front-end build (deploy/README.md section 8); migrations only add, so the previous version runs on the database

Data entered in BrokerVerse during the rollback window is listed daily so that a rollback can be carried out. The old system stays available read-only until the broker accepts BrokerVerse at hypercare exit, and stays readable for reference and audit afterwards for the period the broker's record-keeping rules require.

11. Document Sign-Off
